PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Shipped production **Python** and **Java Spring Boot** systems at scale, including microservices and data pipelines deployed across **AWS (EC2, S3, Lambda, CloudWatch)** and containerised via **Docker**; managed full software delivery lifecycle from development through **CI/CD (Jenkins, Git)** to production support with **99.5% uptime SLA** enforcement.
- Integrated and operated **LLM-based observability and monitoring systems** using **Splunk, Dynatrace, and CloudWatch** for production incident detection, root-cause analysis, and agentic alerting; evaluated emerging AI-driven monitoring tools and recommended adoption patterns, reducing mean-time-to-resolution by **40%**.
- Authored **infrastructure-as-code** patterns for multi-cloud deployments across **AWS and Azure** using **Docker, Kubernetes concepts, and CI/CD automation**; standardised deployment repeatability and handoff to platform teams, enabling **8 new production services** to launch with consistent operational guardrails.
- Built production-grade **Python data pipelines (pandas, NumPy, scikit-learn)** and **REST APIs** to integrate enterprise business systems, ERP modules, and payments platforms; implemented **prompt engineering and function-calling patterns** to augment system integration workflows, reducing manual configuration time by **35%**.
- Evaluated and recommended emerging **AI technologies and frameworks** (agent orchestration, memory systems, guardrails) through rapid proof-of-concept cycles; produced technical architecture guidance and coached **15+ engineers** on adoption, selection criteria, and production-readiness standards across regulated financial-services and enterprise domains.
- Communicated complex technical decisions to both engineering and non-technical stakeholders through **architecture forums, technical blogs, and live demonstrations**; documented operational runbooks and deployment patterns in **Confluence**, enabling self-service adoption of new AI capabilities across **3 business units**.

SKILLS

AI Engineering & LLM Systems – LLM integration, prompt engineering, retrieval-augmented generation (RAG), function calling, agent frameworks and orchestration, agentic evaluation, observability and instrumentation, AI guardrails and safety, Model Context Protocol (MCP), memory systems.

Programming Languages – Python, Java, TypeScript, SQL, Bash/Shell scripting.

Cloud & Infrastructure-as-Code – AWS (EC2, S3, Lambda, CloudWatch), Azure, Crossplane, Docker, Kubernetes, CI/CD (Jenkins, Git), infrastructure automation.

Data Engineering & Analytics – Data pipelines, ETL, data modelling, Power BI, Tableau, DAX, Power Query, pandas, NumPy, scikit-learn, SQL (PostgreSQL, MySQL, Oracle), big-data concepts (Hadoop, Spark).

Enterprise & Payments Domain – Spring Boot REST APIs, ERP integration, change-control management, production support, SLA management, P1/P2 incident response, SWIFT messaging (MT/MX), ISO 20022 message flows, SEPA, payments processing, cross-border payments, PSD2, Open Banking.

Tools & Platforms – Splunk, Dynatrace, Jira, Confluence, GitHub Copilot, Claude Code, Cursor, Git branching, code reviews.

Soft Skills – Technical mentorship, stakeholder communication, architecture decision-making, rapid technology evaluation, knowledge sharing and internal advocacy.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

**BACHELOR OF ENGINEERING in Computer Science – SNS College
of Technology, Coimbatore, India**

01/2021

PROJECTS

AI-Driven Observability & Incident Response Orchestration Platform (HCL Technologies)

- Architected and deployed a **Python + TypeScript microservices platform** that integrated emerging **LLM-based agentic frameworks** with **Splunk, Dynatrace, and CloudWatch** to automate P1/P2 incident triage, root-cause analysis, and remediation recommendations across **40+ enterprise Java/Spring Boot applications** in production.
- Implemented **infrastructure-as-code deployment patterns** using **Crossplane** and **Kubernetes** across **AWS and Azure**, enabling repeatable onboarding of new observability agents and agentic guardrails; achieved **100% consistent deployment** across cloud platforms with zero manual configuration variance.
- Engineered **prompt engineering and function-calling workflows** to direct **GitHub Copilot and Claude Code agents** in generating remediation scripts and infrastructure patches; evaluated **3 competing agent frameworks** and published architecture recommendation matrix adopted by **5 platform teams**.
- Reduced mean-time-to-resolution by **40%** and alert fatigue by **55%** through AI-driven noise filtering and contextual severity classification; coached **20+ engineers** on configuring agentic observability tooling and selecting technologies appropriate to SLA constraints.
- Documented deployment runbooks, agentic guardrail configurations, and best-practice guides in **Confluence** and delivered **12 internal technical presentations** across architecture forums; enabled self-service adoption, reducing time-to-production for new incident-response use cases by **6 weeks**.

Multi-Cloud Payments & ERP Integration Gateway with LLM-Enhanced Workflow Automation (HCL Technologies)

- Built a production **Python (Flask/FastAPI) and Spring Boot REST API gateway** integrating **SWIFT messaging (MT/MX), ISO 20022 message flows**, and ERP systems across PostgreSQL, MySQL, and Oracle databases; handled **2M+ daily payment transactions** with **99.95% availability**.
- Deployed **infrastructure-as-code patterns (Docker, Kubernetes, CI/CD Jenkins pipelines)** across **AWS and Azure** for blue-green deployments and automated failover; reduced deployment risk and post-implementation support overhead by **45%**.
- Integrated emerging **LLM-based function-calling agents** to automate transaction reconciliation, regulatory compliance checks (GDPR, PSD2 audit trails), and cross-border payment workflow validation; improved reconciliation accuracy from **94% to 98.7%** with **70% reduction** in manual review effort.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
