PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and operated **production monitoring infrastructure** using **Splunk, CloudWatch, and Dynatrace** to achieve **99.9% service availability** across enterprise Java/.NET applications, managing **P1/P2 incident response** and **SLA compliance** for mission-critical payment systems serving **500K+ daily transactions**.
- Architected **CI/CD pipelines** via **Jenkins, Git, and Docker** to automate deployment workflows, reducing release-cycle time by **40%** and enabling **continuous integration** across **12+ microservices** in production payment-operations environments.
- Built **reliability automation** using **Python scripting, AWS Lambda, and scheduled cron jobs** to implement **auto-remediation** for **30+ recurring operational incidents**, reducing mean time to recovery (MTTR) by **65%** and manual interventions by **80 hours/month**.
- Managed **change-control workflows** and **configuration management** for enterprise systems supporting banking clients, coordinating **UAT, post-go-live support, and regulatory compliance** across interconnected **ERP and payment-processing platforms** with **zero production incidents** in **18+ major deployments**.
- Optimized database reliability across **PostgreSQL, MySQL, and Oracle** through **query performance tuning, schema validation, and data-integrity monitoring**, reducing query latency by **35%** and supporting **real-time transaction visibility** for **SWIFT MT/MX message flows** and **ISO 20022 payments processing**.
- Collaborated with cross-functional teams (operations, business analysts, domain stakeholders) to define **reliability SLOs, alerting policies, and operational runbooks**, improving incident response coordination and achieving **97% first-contact resolution rate** for production issues across **financial-services and payment-operations domains**.

SKILLS

Site Reliability & Infrastructure – Production monitoring, Splunk, CloudWatch, Dynatrace, SLA management, incident response, availability optimization, alerting and observability.

Cloud & Infrastructure-as-Code – AWS (EC2, S3, Lambda, CloudWatch), Docker, containerization, deployment automation, cloud cost optimization.

CI/CD & Release Engineering – Jenkins, Git, code review, branching strategies, continuous integration, automated deployment, release management.

Backend Development & APIs – Java, Spring Boot, REST APIs, microservices, Python, SQL, system integrations, production support.

Data & Automation – Python scripting, ETL pipelines, data validation, scheduled automation, cron jobs, shell scripting, Linux.

Domain Expertise – Banking and financial services, SWIFT messaging (MT/MX), ISO 20022 message flows, SEPA, cross-border payments, PSD2, Open Banking, payments processing, regulatory compliance, GDPR, change management, ERP systems.

Collaboration & Tools – Jira, Confluence, Agile, Scrum, cross-functional stakeholder management, technical documentation, operational runbooks.

EDUCATION AND TRAINING

PROJECTS

Multi-Region Payment-Systems Reliability Platform (HCL Technologies)

- Designed and deployed a **centralized observability platform** integrating **Splunk, CloudWatch, and Dynatrace** across **3 AWS regions** to provide real-time visibility into **SWIFT MT/MX message flows, ISO 20022 transaction processing, and cross-border payment operations**, reducing incident detection time from **12 minutes to 90 seconds**.
- Implemented **automated remediation playbooks** using **Python, AWS Lambda, and Jenkins CI/CD pipelines** to detect and self-heal **payment-processing bottlenecks, database connection pooling issues, and API timeout conditions**, eliminating **47 manual interventions/month** and achieving **99.95% uptime** across payment operations.
- Established **SLO frameworks, alerting policies, and on-call runbooks** in collaboration with banking-domain operations teams and business stakeholders, defining **reliability metrics** for **transaction settlement latency, message queue depth, and payment-system throughput**, improving **MTTR by 68%** and **first-contact resolution rate to 96%**.
- Optimized **SQL queries and database indexing strategies** across **PostgreSQL and Oracle** backing **payment-reconciliation engines**, reducing **transaction lookup latency by 42%** and enabling real-time **audit-trail and regulatory-compliance reporting** for **GDPR and financial-services governance**.
- Architected **containerized deployment pipelines** using **Docker and Jenkins** to automate **change-control workflows, UAT coordination, and post-go-live support** for **12+ payment-processing microservices**, reducing deployment cycle time by **38%** and enabling **zero-downtime releases** across production environments.

SWIFT Payments-Operations Monitoring & Analytics Dashboard (HCL Technologies)

- Engineered **real-time transaction-flow visibility dashboard** leveraging **Splunk and Dynatrace** to monitor **SWIFT MT/MX message formats, ISO 20022 payment flows, and SEPA/cross-border transaction routing** for a Tier-1 banking client, providing **operational alerting and SLA tracking** for **500K+ daily payment messages**.
- Supported **production reliability and incident management** through continuous monitoring of **payment-systems infrastructure, message-queue throughput, and transaction-settlement latency**, achieving **99.9% availability** and supporting **regulatory compliance, audit trails, and PSD2/Open Banking operational requirements**.
- Collaborated with banking-domain business analysts, operations teams, and compliance stakeholders to define **operational KPIs, alerting thresholds, and post-incident root-cause analysis frameworks**, improving cross-functional incident response coordination and stakeholder trust in payment-systems reliability.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
