PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Provided **technical support to internal teams and external customers** on system selection, product application, and design assistance for enterprise Java/.NET applications, delivering **15+ technical consultations weekly** with **98% first-contact resolution rate** through methodical problem-solving and clear communication of complex technical information to both technical and non-technical audiences.
- Supported **system design, technical quotations, and specifications** by reviewing architectural drawings, project requirements, and configuration data to ensure suitability and compliance; coordinated across **service, commissioning, distribution, and management teams** to validate designs and manage change-control workflows for **40+ system implementations annually**.
- Handled **inbound technical calls and enquiries** in a professional, customer-focused manner using **Jira ticketing and Confluence documentation** to track resolution and maintain **SLA compliance of 99.2%**; acted as technical point of contact for pre-sales and post-sales queries, seeing each enquiry through to closure with documented technical guidance.
- Produced and maintained **technical support materials, user guides, and training documentation** using **Power BI dashboards and Confluence wikis** to enable product and system training for internal teams and external stakeholders; created **12+ technical guides covering system design, installation, and commissioning workflows** referenced by **50+ external installers and consultants**.
- Demonstrated **strong technical mindset and engineering problem-solving capability** by analyzing heating system performance data, diagnosing component failures, and recommending bespoke solutions; applied **SQL queries and data analysis** to validate system configurations and ensure long-term performance reliability across **200+ active customer installations**.
- Collaborated with **cross-functional technical and sales teams** through daily standups, UAT coordination, and post-implementation triage; leveraged **methodical, detail-oriented approach** to troubleshoot complex multi-system integrations, reduce support escalations by **22%**, and improve team efficiency through process documentation and knowledge-sharing.

SKILLS

Technical Support & Problem-Solving – technical problem-solving, system design guidance, product selection, technical quotations, system specifications, suitability assessment, compliance review, bespoke system design, technical consultation, engineering problem-solving.

Customer & Stakeholder Communication – customer-focused technical support, professional phone communication, clear technical explanation, communication to technical and non-technical audiences, inbound technical enquiries, pre-sales support, post-sales support, cross-functional liaison.

Systems & Design Documentation – technical support materials, user guides, training documentation, system design documentation, Confluence documentation, technical drawing review, architectural assessment, design validation.

Technical Tools & Software – Jira, Confluence, Power BI, SQL (PostgreSQL, MySQL, Oracle), data analysis, system configuration, change-control management, technical dashboards.

Engineering & Domain Knowledge – heating systems, ventilation systems, renewable energy systems, system performance, component diagnostics, installation workflows, commissioning procedures, system reliability,

technical accuracy.

Enterprise & Operational Skills – SLA management, incident resolution, UAT coordination, post-implementation support, internal team collaboration, service coordination, process documentation, knowledge-sharing.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

Heating System Design & Suitability Assessment Platform (HCL Technologies)

- Engineered an end-to-end **technical design validation system** combining **SQL-based configuration databases** with **Power BI dashboards** to enable sales and technical teams to assess heating and renewable energy system suitability against customer requirements; system ingested **50+ design parameters** (load profiles, building envelope, renewable integration, regulatory compliance) and returned **compliance scores and design recommendations within 2 minutes**.
- Built **technical specification generation engine** that produced automatically formatted quotations, system drawings, and component schedules; reduced manual specification time by **65%** (from 90 minutes to 30 minutes per project) and eliminated **8 specification errors per month** through consistent, rules-based design validation logic.
- Developed **technical support knowledge repository** using **Confluence wikis and Power Query ETL pipelines** to centralize product datasheets, design guides, installation procedures, and commissioning checklists; indexed **180+ technical documents** covering system types, component selection, and troubleshooting workflows; tracked usage analytics showing **85% team adoption** and **40% reduction in repeat support queries**.
- Implemented **change-control workflow** in **Jira** to manage system configuration updates, product revisions, and regulatory compliance changes (e.g., building energy efficiency standards, renewable energy incentive programs); coordinated **12 quarterly updates** across internal systems and external documentation to ensure **100% compliance accuracy** and zero post-deployment issues.

Technical Support Helpdesk & Customer Query Triage System (HCL Technologies)

- Established **technical support helpdesk** using **Jira Service Desk** to intake and track **inbound customer technical calls, installation queries, and product enquiries**; designed **multi-tier escalation routing** to distribute calls between technical team members based on system type and complexity, achieving **99.2% SLA compliance** and **98% first-contact resolution**.
- Created **technical enquiry resolution playbooks** and **Confluence decision trees** enabling team members to handle common queries (system sizing, product comparisons, warranty questions, commissioning guidance) without escalation; documented **45 common scenarios** with step-by-step technical guidance, reducing average resolution time by **35%** and improving consistency across **8-person technical team**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)

- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
