PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Resolved critical production issues and CVEs in enterprise **Java Spring Boot** and **Python** microservices through root-cause diagnosis and backport development, reducing mean-time-to-resolution by **40%** across stable release streams; collaborated with **Product Engineering** and **QE** teams globally to ensure patch quality and schedule compliance.
- Developed and executed **automated test plans** using **PyTest** and custom testing frameworks for back-end services, onboarding **30+** test cases into continuous integration workflows; maintained test automation suites across **Jenkins** pipelines and **GitHub Actions** to achieve **95%** regression coverage.
- Managed **CI/CD practices** and release pipeline preparation using **Jenkins**, **Git** branching, and **GitHub Actions**; orchestrated build creation and artifact management for **12** extended-life product streams, reducing release cycle time by **35%**.
- Diagnosed and patched critical failures in **Kubernetes** and **OpenShift** cloud-native environments through log analysis, system metrics monitoring, and integration testing; provided technical leadership on software development maintenance across distributed teams supporting **Red Hat OpenShift** portfolio components.
- Handled security threats and CVE remediation by performing patch review, vulnerability assessment, and backport validation; ensured long-term product experience improvements for **Red Hat OpenShift AI** customers across regional and global business lines through structured incident response and post-mortems.
- Automated operational workflows using **Python** scripting, data pipeline orchestration, and Linux shell scripting; created automation tools and monitoring dashboards to improve efficiency, flexibility, and quality of patch delivery, reducing manual overhead by **45%** and enabling self-service release operations.

SKILLS

Programming & Testing – Python, Go, PyTest, Cypress, automated testing frameworks, test automation, test plan development.

CI/CD & Release Engineering – Jenkins, GitHub Actions, GitLab CI, Git branching, release pipeline preparation, builds creation, patch review, backport development.

Cloud-Native & Container Platforms – Kubernetes, OpenShift, Red Hat OpenShift AI, cloud-native technologies, containerization.

DevOps & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), Docker, Linux, shell scripting, log analysis, monitoring, incident management.

Software Maintenance & Quality – CVE remediation, bug fixes, root-cause diagnosis, test automation, continuous integration, product quality, security threat response.

Backend Development – Java Spring Boot, REST APIs, microservices, system integrations, code reviews.

Data & Analytics – SQL (PostgreSQL, MySQL, Oracle), pandas, NumPy, Power BI, data modelling.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Red Hat OpenShift AI Extended-Life Maintenance Automation Platform (HCL Technologies)

- Architected and deployed an integrated **CVE backport and patch release automation** system using **Python**, **Jenkins** pipelines, and **GitHub Actions** to handle **50+** critical security and bug fixes across **8** extended-life streams of **Red Hat OpenShift AI**, reducing patch validation cycles from **14** days to **4** days.
- Developed comprehensive **automated test suite** using **PyTest** and custom testing frameworks covering back-end service integrations, **Kubernetes** resource reconciliation, and **OpenShift** cluster compatibility; achieved **96%** regression coverage and integrated **25** new test cases into continuous integration workflow.
- Built release pipeline orchestration tooling leveraging **Python** scripting, **Git** branching strategies, and release automation to streamline builds creation and artifact management; reduced manual release overhead by **50%** and enabled parallel processing of **3** concurrent maintenance streams.
- Implemented proactive monitoring and alerting dashboards using **CloudWatch** and custom **Python** data aggregation to detect patch-related regressions in **Kubernetes** environments; responded to **18** critical incidents with **100%** resolution rate and documented root-cause findings for continuous improvement.
- Led root-cause diagnosis and backport execution for **12** high-impact CVEs affecting **Red Hat OpenShift AI** core components; collaborated with **Product Engineering** teams across time zones to validate fixes, ensuring **SLA compliance** and customer security posture improvement.

SWIFT Payments Operations Monitoring & CVE Remediation Dashboard (HCL Technologies)

- Built production-grade monitoring and alerting system for **SWIFT messaging** payment-operations dashboard supporting **ISO 20022** message flows; integrated **Splunk** log aggregation and **CloudWatch** metrics to detect **P1/P2** incidents in real-time, reducing mean-time-to-detection by **60%**.
- Managed security and compliance patch backports for banking-domain applications handling **SEPA** and cross-border payment transactions; ensured **GDPR** and regulatory audit-trail integrity through structured change-control and UAT coordination, achieving **zero** compliance violations across **24** consecutive production releases.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
