PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Analyzed and validated data quality across large datasets using **web-based research**, **SQL** (PostgreSQL, MySQL, Oracle), and **Python** scripts to identify inconsistencies and perform **root cause analysis**, resolving **40+ data integrity issues** monthly in production banking and ERP systems.
- Applied **critical thinking** to identify **high-level data trends** and patterns in transaction flows, system logs, and operational dashboards using **Splunk**, **CloudWatch**, and **Dynatrace**, enabling swift escalation to appropriate technical components and reducing incident resolution time by **35%**.
- Processed and validated business applications and enterprise system configurations through **change-control management** and **UAT coordination**, performing thorough data analysis and trend identification across interconnected ERP modules, REST APIs, and database-level integrations to ensure compliance and operational readiness.
- Researched and troubleshoot issues using **web-based maps applications**, web research, and IT system diagnostics, applying analytical and problem-solving skills to evaluate root causes and provide detailed feedback for escalation to appropriate teams, supporting **50+ cross-functional stakeholders** across banking and enterprise domains.
- Created and maintained **Power BI dashboards** and **Tableau** interactive reports analyzing operational trends, system performance metrics, and business KPIs, using **data modelling**, **DAX measures**, and **Power Query ETL** to deliver actionable insights to business teams and support decision-making.
- Performed occasional **software usability testing** and quality assurance feedback on business applications and web-based tools; documented findings and provided critical analysis to development teams, combining technical acumen with user-centric evaluation across hybrid and independent working modes.

SKILLS

Data Analysis & Validation – data quality assessment, trend identification, pattern recognition, root cause analysis, large dataset processing, critical thinking.

Business Applications & Processing – business application processing, change-control management, UAT coordination, ERP system support, enterprise system integrations.

Web Research & Investigation – web-based research, web-based maps applications, information validation, troubleshooting, issue resolution.

Data Tools & BI Platforms – Power BI, Tableau, Power Query, DAX, SQL (PostgreSQL, MySQL, Oracle), data modelling, data warehousing.

Technical Stack – Python, Java, Spring Boot, AWS (EC2, S3, Lambda, CloudWatch), Docker, Linux, Git, Jenkins, Splunk, Dynatrace.

Business & Domain Knowledge – banking and financial services, payments processing, SWIFT messaging (MT/MX), ISO 20022, SEPA, PSD2, GDPR, regulatory compliance.

Soft Skills & Collaboration – English communication (IELTS Band 7), independent work, cross-functional teamwork, software usability testing, stakeholder engagement.

EDUCATION AND TRAINING

PROJECTS

Business Data Quality & Trend Analysis Dashboard (HCL Technologies)

- Designed and deployed a comprehensive **Power BI dashboard** consolidating data quality metrics, validation trends, and root cause analysis across **12+ interconnected banking and ERP systems**, enabling **real-time trend identification** and critical thinking-driven escalation decision-making.
- Architected **web-based research automation** and **data validation pipelines** using **Python** and **SQL** to process **250,000+ daily business application records**, applying statistical analysis and pattern recognition to flag **anomalies with 98% accuracy** and reduce manual investigation overhead by **60%**.
- Integrated **Splunk**, **CloudWatch**, and **Dynatrace** monitoring data into unified analytical models using **Power Query ETL** and **DAX measures**, providing cross-functional teams visibility into system performance trends and supporting **SLA adherence improvements of 28%**.
- Performed iterative **software usability testing** and feedback cycles on web-based data validation and map-based research tools, combining hands-on testing with critical analysis to identify **15+ UX and functional gaps**, documented root causes, and escalated findings to component owners for prioritized remediation.

Banking Payments Operations Data Validation Framework (HCL Technologies)

- Built an end-to-end **data validation framework** for SWIFT messaging and **ISO 20022 message flows** across banking payment operations, leveraging **Python**, **SQL**, and **web-based research** to validate transaction integrity, message structure compliance, and regulatory adherence against **GDPR** and **SEPA standards**.
- Analyzed **high-level data trends** in cross-border and instant payment processing, identifying root causes of **failed reconciliation workflows** and applying critical thinking to recommend systemic improvements, reducing payment validation errors by **45%** and enabling **99.8% transaction accuracy**.
- Collaborated with banking-domain business analysts and operations teams to process and validate business application configurations, performing **UAT support** and **root cause analysis** on escalated payment processing issues, ensuring compliance with **PSD2** and **Open Banking** regulatory frameworks.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
