PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Architected and deployed **shared platform microservices** using **Java Spring Boot** and **REST APIs** consumed by 5+ downstream product teams, implementing **event-driven patterns** for inter-service communication and reducing end-to-end latency by **35%** through performance optimization and **Kubernetes** container orchestration across **AWS** cloud environments.
- Owned critical backend service reliability from conception through production deployment, establishing **observability** via **Splunk, CloudWatch, and Dynatrace** dashboards to monitor **distributed systems** performance; responded to **P1/P2 incidents** with **99.5% SLA** adherence through root-cause analysis and architectural resilience improvements across **multi-tenant enterprise SaaS** infrastructure.
- Designed and maintained **shared library components** and **platform frameworks** enforced via **CI/CD pipelines (Jenkins)** and **Git** branching standards, conducting rigorous code reviews and **pair programming** sessions with junior engineers to establish **best practices** for backend development; reduced integration friction by **40%** across 8+ consuming teams.
- Built **data pipelines** and **ETL processes** using **Python** scripting and **SQL (PostgreSQL, MySQL, Oracle)** to ingest, transform, and analyze **system performance data patterns** at scale; leveraged insights to identify **optimization opportunities** and inform platform architecture investments, delivering **3 major resilience initiatives** that improved throughput by **28%**.
- Drove cross-functional platform technical initiatives by collaborating with product engineers, **DevOps**, and solution architects to define shared **platform capabilities, API design governance**, and technical standards; managed **change-control** processes and **UAT coordination** for infrastructure updates affecting 12+ dependent services with zero production regressions.
- Containerized legacy monolithic services using **Docker** and orchestrated deployments via **Kubernetes** clusters with **infrastructure-as-code** practices; implemented **CI/CD automation** through **Jenkins** pipelines reducing deployment cycle time from **6 hours to 45 minutes** and enabling rapid iteration across the platform engineering team.

SKILLS

Backend & Microservices Architecture – Java Spring Boot, REST APIs, event-driven design patterns, microservices, distributed systems, service-oriented architecture.

Cloud & Containerization – Kubernetes, Docker, AWS (EC2, S3, Lambda, CloudWatch), container orchestration, infrastructure-as-code, multi-cloud deployment.

Data & Analytics – Python (pandas, NumPy, scikit-learn), SQL (PostgreSQL, MySQL, Oracle), ETL pipelines, data modeling, observability (Splunk, Dynatrace, CloudWatch), performance analysis.

DevOps & Reliability – CI/CD (Jenkins), Git, code review practices, SLA management, incident response (P1/P2), system monitoring, observability tooling, change management.

Enterprise & Platform Engineering – Shared library development, platform components, API governance, multi-tenant SaaS architecture, enterprise-scale workloads, cross-team collaboration.

Development Practices – Pair programming, code quality, technical mentorship, architectural decision-making, best practices documentation, Agile/Scrum, Jira, Confluence.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin

02/2026

BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India

01/2021

PROJECTS

Distributed Identity & Access Platform – Shared Library Framework (HCL Technologies)

- Architected a **shared platform library framework** using **Java Spring Boot** and **.NET Core** patterns, standardizing **API design governance** and security controls across 6 identity and access management microservices; reduced boilerplate code by **45%** and improved consistency in **enterprise SaaS** authentication flows handling **10M+ daily transactions**.
- Implemented **event-driven architecture** using message-broker patterns to decouple identity provisioning, entitlement updates, and audit-logging services; deployed to **Kubernetes** clusters across **AWS** multi-region infrastructure with automated scaling, achieving **99.95% availability** under peak **multi-tenant** workload conditions.
- Built comprehensive **observability** dashboards via **CloudWatch, Splunk, and Dynatrace** to monitor platform component health, dependency latency, and error propagation; identified bottleneck in shared token-validation library causing **8% tail latency**, optimized caching strategy, and reduced end-to-end request latency by **32%**.
- Established **CI/CD automation** via **Jenkins** pipelines with **infrastructure-as-code** provisioning, enabling **12+ consuming teams** to integrate and deploy against the platform library with zero breaking changes; conducted **peer code reviews** and **pair programming** sessions, raising code quality standards and mentoring **3 junior engineers** in microservices best practices.
- Collaborated with product architects and DevOps to define **platform capabilities roadmap**, technical standards for **distributed systems** design, and **API design governance** policies; documented architectural decision records and integration guides, reducing time-to-onboard new teams from **6 weeks to 2 weeks**.

Enterprise Payments Operations Dashboard – Real-Time Monitoring & Resilience Platform (HCL Technologies)

- Developed **shared monitoring platform components** for real-time **SWIFT messaging** and **ISO 20022 message flows** using **Python ETL pipelines** and **SQL** data warehousing; ingested **50K+ payment transactions daily** from **PostgreSQL** and **Oracle** backends, transforming **MT/MX message metadata** into operational dashboards consumed by payment-operations teams across **SEPA** and cross-border payment processes.
- Implemented **multi-tenant SaaS architecture** with **Kubernetes**-orchestrated backend services and **AWS** cloud infrastructure to support real-time message routing, validation, and audit-trail logging; achieved **99.7% SLA** uptime required for regulated banking environments with sub-second message processing latency.
- Established **observability framework** via **CloudWatch, Splunk, and Dynatrace** dashboards tracking payment-message SLA compliance, transaction-flow visibility, and regulatory alerting; automated detection of payment failures reduced mean-time-to-resolution by **62%** and eliminated manual alert triage overhead for operations staff.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)

- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
