PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Diagnosed and resolved complex production equipment faults across enterprise applications using **monitoring dashboards (Splunk, Dynatrace, CloudWatch)** and fault-pattern analysis, reducing mean-time-to-resolution by **35%** and maintaining **99.5% service uptime SLA** for critical infrastructure clients.
- Provided specialist technical support to service engineers and customers by analyzing equipment behavior data, interpreting diagnostic signals, and recommending corrective actions that prevented **12+ major asset failures** annually and ensured service continuity during peak operational demand.
- Captured, retained, and shared technical knowledge across service organizations through comprehensive **documentation, runbooks, and training materials in Confluence**, enabling **8 field engineers** to resolve issues independently and reducing escalations by **40%**.
- Escalated complex technical issues to relevant domain experts and liaised cross-functionally with customer operations teams, BAs, and internal stakeholders to triage root causes, implement lasting solutions, and communicate technical findings to non-technical audiences with clarity and confidence.
- Supported industrial equipment reliability and operational performance through change-control management via **Jira**, coordinating UAT for system updates, post-implementation triage, and continuous monitoring to ensure fault patterns were identified early and remediation was prioritized by severity and business impact.
- Analyzed industrial asset data using **SQL (PostgreSQL, MySQL, Oracle)**, **Python scripting**, and **Power BI dashboards** to track equipment behavior trends, build predictive maintenance models, and deliver technical performance reports that reduced unplanned downtime by **28%** across customer portfolios.

SKILLS

Technical Troubleshooting & Diagnostics – fault diagnosis, equipment behavior analysis, problem-solving, root-cause analysis, diagnostic data interpretation, predictive maintenance modelling.

Monitoring & Operational Reliability – Splunk, Dynatrace, CloudWatch, SLA management, incident response, uptime optimization, asset performance tracking, continuous monitoring.

Technical Support & Knowledge Management – technical escalation, specialist support delivery, knowledge capture, documentation, training materials, runbooks, Confluence, stakeholder communication.

Industrial & Enterprise Systems – equipment support, rotating equipment expertise, ERP integration support, change-control management, UAT coordination, post-implementation triage, cross-system reliability.

Data Analysis & Technical Reporting – SQL (PostgreSQL, MySQL, Oracle), Python, Power BI, data modelling, trend analysis, performance dashboards, technical metrics, fault-pattern reporting.

Cloud & Infrastructure – AWS (EC2, S3, CloudWatch), Docker, Linux, shell scripting, log analysis, CI/CD (Jenkins, Git).

Professional Credentials – IELTS Band 7, MSc Data Analytics (NCI), Bachelor of Engineering Computer Science (SNS College).

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Industrial Equipment Fault Diagnosis & Predictive Maintenance Platform (HCL Technologies)

- Designed and implemented an end-to-end diagnostic platform combining **Splunk monitoring**, **Python data pipelines**, and **Power BI dashboards** to capture, analyze, and visualize equipment behavior patterns across rotating pumps and industrial assets for a major utilities client.
- Built automated **fault-pattern detection algorithms** using **Python (pandas, scikit-learn)** that identified **18 signature failure modes** with **87% predictive accuracy**, enabling service engineers to diagnose issues 3–5 days before critical failure and preventing **\$2.1M in unplanned downtime** annually.
- Developed interactive **Power BI technical dashboards** using **DAX measures and data modelling** to surface equipment health KPIs, fault-rate trends, and mean-time-between-failures (MTBF) by asset class and geography, enabling operations teams to prioritize maintenance and optimize service resource allocation.
- Established **technical documentation and runbooks** in **Confluence** capturing diagnostic workflows, corrective-action decision trees, and equipment-specific troubleshooting guides; trained **6 service engineers** on platform use, reducing support escalations by **45%** and enabling field teams to self-resolve **65% of fault cases**.
- Integrated **Oracle and PostgreSQL databases** via **REST APIs** to unify equipment telemetry, maintenance history, and customer-specific configuration data into a single source of truth; automated **daily ETL pipelines** to refresh dashboards and alert on emerging fault patterns in real time.

SWIFT Payments Operations Dashboard & SLA Monitoring System (HCL Technologies)

- Architected and maintained a **real-time payments-operations dashboard** using **Splunk and CloudWatch** to monitor SWIFT messaging flows, transaction-processing latency, and payment-system health for a Tier-1 banking client, achieving **99.7% dashboard uptime** and supporting **SLA compliance reporting** across cross-border and SEPA payment corridors.
- Performed rapid root-cause analysis and incident triage on **P1/P2 production faults** impacting SWIFT MT/MX message delivery and ISO 20022 message-processing pipelines; resolved **94% of critical incidents** within **2-hour SLA windows**, protecting regulatory compliance and preventing transaction delays.
- Collaborated with banking-domain BAs, operations teams, and regulatory stakeholders to define technical requirements for payment-flow visibility, audit-trail logging, and GDPR-compliant data retention; translated business requirements into **Splunk monitoring configurations** and **PostgreSQL schema updates** that enhanced operational transparency and risk management.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
