PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Provided **production support and incident response** for business-critical trading and enterprise systems using **Splunk, CloudWatch, and Dynatrace** for real-time monitoring and alerting; diagnosed and resolved application issues through **log analysis** and system behaviour investigation, maintaining **99.5% uptime SLA** across P1/P2 incidents in time-sensitive trading environments.
- Built and deployed **Python automation scripts and tooling** for repetitive operational tasks including data pipelines, ETL workflows, and scheduled reporting; reduced manual intervention by **40%** through shell scripting, cron job automation, and Linux-based infrastructure management, increasing system reliability and operational efficiency.
- Engineered **distributed system integrations** across interconnected trading and enterprise platforms using **REST APIs, PostgreSQL, MySQL, and Oracle**; managed **database systems and data-driven applications** through ad-hoc queries, schema changes, and cross-system data flows, supporting seamless communication between development, infrastructure, and business teams.
- Developed and maintained **monitoring and alerting infrastructure** using **Splunk dashboards and CloudWatch metrics** to proactively detect anomalies and system performance degradation; implemented custom alerts and operational dashboards that reduced mean time to detection (MTTD) by **35%** and enabled rapid incident triage across global trading operations.
- Deployed and managed **containerised applications using Docker** within **AWS infrastructure (EC2, S3, Lambda)**; orchestrated **CI/CD pipelines via Jenkins** with Git branching and code review workflows to automate system deployments; supported change-control management and UAT coordination across interconnected systems, ensuring stability and scalability for business growth.
- Managed production ticketing and incident workflows using **Jira and concurrent support request tracking**; conducted post-incident reviews to identify trends and root causes, implementing continuous improvements that increased system automation and operational efficiency; communicated technical findings clearly to both technical infrastructure teams and non-technical business stakeholders under pressure in fast-paced trading environments.

SKILLS

Production Support & Incident Management – production troubleshooting, P1/P2 incident response, SLA management, mean time to resolution (MTTR), post-incident review, root cause analysis.

Monitoring & Alerting Tools – Splunk, CloudWatch, Dynatrace, log analysis, dashboard creation, real-time alerting, anomaly detection.

Scripting & Automation – Python, shell scripting, cron jobs, automation tooling, data pipeline development, ETL workflows, infrastructure automation.

Distributed Systems & Networking – system interactions, REST APIs, cross-system integrations, networking fundamentals, distributed application support.

Database Systems & Data Applications – PostgreSQL, MySQL, Oracle, SQL queries, schema management, data-driven application support, database administration.

Cloud Infrastructure & Containerisation – AWS (EC2, S3, Lambda, CloudWatch), Docker, deployment automation, system configuration, capacity and resilience management.

DevOps & Change Management – Jenkins, CI/CD pipelines, Git, code review, change-control procedures, UAT coordination, documentation, ticketing systems (Jira), configuration management.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

Real-Time Trading System Reliability & Automation Platform (HCL Technologies)

- Architected and deployed an integrated **production monitoring and automation framework** combining **Splunk, CloudWatch, and custom Python alerting scripts** to monitor distributed trading systems across global operations; reduced manual incident detection by **50%** through proactive anomaly detection and automated escalation workflows.
- Engineered **Python-based automation tooling** to eliminate repetitive operational tasks including data reconciliation, system health checks, and log aggregation; deployed via **Lambda, cron jobs, and shell scripting** on Linux infrastructure, reducing operational toil by **45%** and enabling support engineers to focus on complex troubleshooting.
- Built **REST API integrations** to synchronise data across trading platforms and backend systems using **PostgreSQL and Oracle databases**; implemented robust error handling and retry logic to ensure **99.8% data consistency** across interconnected systems and support seamless communication between development and infrastructure teams.
- Developed comprehensive **incident response documentation and support procedures** including runbooks for common failure scenarios, escalation playbooks, and best-practice guidelines; trained support teams on **log analysis techniques and system behaviour diagnosis**, reducing mean time to resolution (MTTR) by **30%** across all P1/P2 incidents.
- Deployed and managed containerised trading applications using **Docker on AWS (EC2, S3, Lambda)** with automated **Jenkins CI/CD pipelines** for rapid, reliable deployments; implemented capacity monitoring and auto-scaling policies to support **3x business growth** without performance degradation or stability issues.

SWIFT Payments Operations Dashboard & Regulatory Compliance Framework (HCL Technologies)

- Designed and supported production monitoring for enterprise **SWIFT messaging (MT/MX format) and ISO 20022 payments processing** dashboard serving a major banking client; implemented **Splunk-based operational alerting** to ensure transaction-flow visibility and regulatory audit trails, supporting **50,000+ daily payment messages** with zero untracked transactions.
- Collaborated with banking-domain business analysts and operations teams to translate **GDPR and Data Protection compliance requirements** into system monitoring and access-control workflows; ensured all production changes underwent formal change-control management and UAT coordination before go-live, maintaining regulatory compliance across SEPA and cross-border payment flows.
- Optimised **PostgreSQL and Oracle databases** supporting payments reconciliation workflows and tokenization data; executed schema changes and ad-hoc data validation queries to resolve transaction discrepancies, reducing reconciliation cycle time by **25%** and improving straight-through processing (STP) rates for instant and cross-border payments.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
