PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Owned **end-to-end delivery and production support of financial services data products** for SWIFT messaging and payments-operations dashboards, ensuring **99.8% data timeliness** and accuracy across daily transaction volumes exceeding 50,000 payment messages through root cause analysis, remediation, and prevention of recurring data quality issues.
- Translated **financial domain business needs into actionable functional and technical specifications**, including data mappings, transformation logic, and validation rules for ISO 20022 message flows, SEPA/cross-border payments, and tokenization workflows; partnered with business stakeholders and engineering teams to validate implementations against business intent.
- Managed **BAU data provisioning and issue investigation** across PostgreSQL, MySQL, and Oracle databases, writing complex **SQL queries** for ad-hoc data validation, schema changes, and reconciliation workflows; proactively monitored data quality metrics and drove resolution of **95% of production data issues** to completion within SLA.
- Supported **Agile delivery model** through backlog refinement, sprint planning, story breakdown, and acceptance criteria definition for data product releases; collaborated with **data engineering teams** to review SQL logic, **Python ETL pipelines**, and **REST API** integrations across interconnected financial systems.
- Implemented **change-control management** and UAT coordination for system configuration updates and post-go-live support across enterprise business systems and ERP modules; ensured regulatory compliance with **GDPR**, audit trails, and financial-services SLA requirements across cross-functional banking operations teams.
- Delivered **operational dashboards and data visualisation** using **monitoring platforms (Splunk, CloudWatch, Dynatrace)** to track data pipeline health, transaction-flow visibility, and alerting for **100+ daily critical metrics**; enabled business stakeholders with real-time insights into payment message status, settlement reconciliation, and regulatory reporting.

SKILLS

Financial Services & Domain Knowledge – SWIFT messaging (MT/MX formats), ISO 20022 message flows, SEPA and cross-border payments, PSD2/Open Banking, tokenization, payments processing, reconciliation workflows, regulatory compliance (GDPR), SLA management, capital markets operations.

Data & Business Systems – SQL (PostgreSQL, MySQL, Oracle), data modelling, data warehousing, ETL design and validation, data quality assessment, schema design, ad-hoc reporting, functional specifications, business requirements analysis.

Technical & Integration – REST API integrations, ERP systems support, enterprise business systems, change-control management, system interconnections, data flow architecture, Python scripting (pandas, NumPy), shell scripting.

Production Support & Monitoring – Incident investigation and root cause analysis, production issue resolution, data pipeline troubleshooting, Splunk, CloudWatch, Dynatrace, operational alerting, SLA tracking, P1/P2 incident response.

Tools & Platforms – Jira, Confluence, Git, Jenkins CI/CD, AWS (EC2, S3, Lambda, CloudWatch), Docker, Linux, Power BI, Tableau.

Methodologies – Agile/Scrum, backlog refinement, sprint planning, UAT coordination, acceptance criteria definition, story breakdown, release readiness.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

Financial Services Data Onboarding & Quality Platform (HCL Technologies)

- Architected and owned end-to-end **data onboarding pipeline** for capital markets and payments clients, handling **12 distinct ISO 20022 message feeds** with **real-time validation** of data transformations across PostgreSQL and Oracle warehouses; reduced data ingestion latency by **40%** and eliminated **98% of recurring validation errors** through automated quality rules and **SQL-driven reconciliation workflows**.
- Built **technical functional specifications** translating business requirements (SEPA compliance, cross-border payment routing, settlement reconciliation) into implementable data mappings and transformation logic; conducted **SQL code reviews** with engineering teams to ensure correctness against business intent, achieving **zero production data mismatches** in first release.
- Implemented **Splunk and CloudWatch dashboards** monitoring **15+ critical data quality metrics** (message volumes, latency, reconciliation variance, schema drift) with automated alerting; achieved **99.8% SLA compliance** for transaction-flow visibility and enabled business operations teams to detect payment anomalies within **5 minutes** of occurrence.
- Delivered **Agile backlog refinement and sprint planning** for quarterly data product enhancements; wrote detailed acceptance criteria incorporating regulatory requirements (GDPR audit trails, PSD2 reporting standards), performed UAT coordination with banking stakeholders, and managed **6 production releases** with zero data-integrity incidents.
- Authored comprehensive **technical documentation and runbooks** in Confluence for BAU data support teams, covering root cause investigation procedures, common SQL troubleshooting patterns, and remediation workflows; enabled **50% faster mean time to resolution (MTTR)** for production data issues through self-service knowledge base.

SWIFT Payments Operations Dashboard & ISO 20022 Migration Support (HCL Technologies)

- Led **production support and monitoring** of enterprise SWIFT messaging dashboard serving **tier-1 banking client**, managing **P1/P2 incident response** for payment-operations platform with **99.95% uptime SLA**; performed root cause analysis on **transaction-flow anomalies**, database query optimization, and configuration troubleshooting to resolve **85% of critical incidents** within 2-hour response window.
- Collaborated with business stakeholders and banking operations teams to map **ISO 20022 migration requirements**, translating legacy MT message formats into new MX schema specifications; validated data transformation logic through **SQL and Python ETL scripts**, ensuring **100% message accuracy** across SEPA instant payments and cross-border payment corridors.
- Implemented change-control workflows and UAT coordination for post-migration production support; tracked **regulatory compliance** requirements (GDPR, audit trail preservation, settlement reconciliation) and enabled auditor sign-off on data integrity across **48 payment corridors** processing **40,000+ daily transactions**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
