PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Delivered **enterprise technical support** for production Java/.NET applications across **complex, multi-layered customer environments**, managing P1/P2 incident response and SLA compliance using **Splunk, CloudWatch, and Dynatrace** for real-time **log analysis and vulnerability assessment**, reducing incident resolution time by 35%.
- Analysed and clarified **customer technical inquiries** by recreating software issues in **lab environments**, troubleshooting **system configuration, patch deployment, and OS administration** across Linux/Windows production systems, and published **solution knowledge** for re-use by customers and internal teams, resolving **180+ support cases annually**.
- Served as **primary technical liaison** between customers and internal groups (Product Management, Sales, R&D;), supporting **enterprise client environments** with **network security** expertise, **TCP/IP networking, OS administration**, and **system configuration troubleshooting** resulting in **92% first-contact resolution rate**.
- Maintained **in-depth knowledge of vulnerability assessment tools, log correlation, and real-time vulnerability analysis** using **Splunk SEIM log analysis**, SQL database technologies (**PostgreSQL, MySQL, Oracle**), and cloud/virtualization platforms (**AWS EC2, S3, Lambda, Docker**) to support customer security posture and close cyber exposure gaps.
- Demonstrated **strong analytical and problem-solving skills** by implementing **Python scripting for automation, REST API integrations, and CI/CD pipelines via Jenkins** to accelerate case resolutions, manage multiple priorities in fast-paced environments, and deliver exceptional customer-focused technical support across ticketing systems (**Jira**).
- Applied **computer, network, and application security knowledge** with familiarity in **certificate management and PKI concepts, PCAPs analysis with Wireshark, and AI-driven technologies** to amplify technical support impact, automate routine troubleshooting tasks, and provide exceptional TSE and customer experience for vulnerability management solutions.

SKILLS

Technical Support & Enterprise Systems – enterprise technical support, incident response management, SLA compliance, production support, customer technical liaison, troubleshooting complex issues, lab environment testing.

System Administration & Infrastructure – Linux/Windows/macOS OS administration, system configuration, patch deployment, TCP/IP networking, network security, AWS (EC2, S3, Lambda, CloudWatch), Docker, virtualization.

Monitoring, Logging & Analytics – Splunk SEIM log analysis, CloudWatch, Dynatrace, real-time vulnerability analysis, log correlation, system audit analysis, Wireshark PCAP analysis.

Database & Data Technologies – SQL, PostgreSQL, MySQL, Oracle, database technologies, data queries, schema administration.

Development & Automation – Python scripting, Java Spring Boot, REST API development, CI/CD pipelines (Jenkins), Git, Linux shell scripting, automation frameworks.

Knowledge Management & Tools – solution knowledge creation, Jira ticketing systems, Confluence documentation, customer-focused technical writing, AI-augmented support models.

Cybersecurity & Compliance – computer/network/application security, certificate management and PKI, vulnerability assessment, compliance auditing, information security best practices.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

Vulnerability Assessment & Incident Response Knowledge Base (HCL Technologies)

- Architected a comprehensive **technical support knowledge repository** capturing **vulnerability scan result analysis, system audit interpretation, and log event correlation** workflows, enabling **180+ monthly support cases** to be resolved **40% faster** through self-service customer documentation and TSE reference materials.
- Developed automated **lab environment issue recreation workflows** using **Python scripting and Docker containerization** to simulate customer production configurations across **Linux/Windows/macOS OS environments, AWS cloud infrastructure (EC2, S3, Lambda), and multi-tier application stacks**, reducing average case diagnosis time from **8 hours to 2.5 hours**.
- Implemented **real-time vulnerability analysis dashboards** using **Splunk SEIM log analysis and SQL database queries (PostgreSQL, MySQL, Oracle)** to correlate customer scan events, security alerts, and patch deployment status, providing incident visibility to **50+ enterprise customers** and enabling proactive cyber exposure gap closure.
- Integrated **AI-driven technologies** into the support workflow to automate routine troubleshooting case triage, recommend solutions based on historical ticket patterns, and accelerate resolution pathways, improving **TSE productivity by 28%** while maintaining exceptional customer-focused support quality.
- Collaborated cross-functionally with **Product Management, Sales, and R&D; teams** to gather requirements from **complex, multi-layered customer environments**, prioritize support knowledge gaps, and create technical guides covering **network security best practices, certificate management, and PKI concepts** for vulnerability assessment tool deployment.

Production Monitoring & System Configuration Audit Framework (HCL Technologies)

- Deployed an integrated **monitoring and log analysis platform** using **Splunk, CloudWatch, and Dynatrace** to support enterprise technical support operations across **Linux/Windows production systems**, enabling **SLA-compliant incident response** for P1/P2 issues with **92% first-contact resolution rate**.
- Engineered **system configuration validation workflows** using **Python automation scripts and SQL database audits (PostgreSQL, MySQL, Oracle)** to verify patch deployment compliance, OS administration best practices, and TCP/IP network configuration across customer environments, identifying **350+ misconfigurations annually**.
- Established **customer technical inquiry analysis processes** that recreate issues in lab environments using **Docker containerization, AWS infrastructure (EC2, Lambda), and application stacks**, reducing troubleshooting cycles for **complex, multi-layered systems** by **45%** and improving technical support effectiveness.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
