PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Architected and deployed **Java Spring Boot microservices** processing millions of financial transactions daily on **AWS (EC2, DynamoDB, Lambda)**, implementing **Apache Pulsar** for message-based integrations and **Apache Camel** for payment message routing and transformation; reduced transaction latency by **18%** through optimized service design and automated testing.
- Built full-stack **React** frontend integrated with **Java/Kotlin** backend services to deliver Toast's innovative payments pricing platform; implemented **continuous delivery** and **automated testing** pipelines via **Jenkins** and **Git**, ensuring zero-downtime deployments and **99.95% uptime SLA** in production.
- Designed and maintained reliable, scalable payments processing features across interconnected systems using **REST APIs, DynamoDB persistence**, and event-driven architecture with **Apache Pulsar**; collaborated with cross-functional team members on solution design, estimation, coding, code review, and end-to-end testing to process **\$2.5B+ annually** with 100% accuracy.
- Led production support and incident response for enterprise payment systems, implementing **CloudWatch monitoring, Dynatrace** observability, and **Splunk** log analysis to detect and resolve P1/P2 issues within SLA; developed **Python automation scripts** and **Linux shell scripts** for operational alerting, reducing mean time to resolution (MTTR) by **35%**.
- Executed quality-focused practices including security reviews, performance testing, and integration testing across **DynamoDB** and **AWS** infrastructure; performed **SQL optimization** on **PostgreSQL** and **MySQL** databases supporting payment transaction workflows; documented all changes via **Confluence** and managed change-control for reliable deployments.
- Demonstrated aptitude for tackling complex, ambiguous payments domain problems with technical guidance; built deep fintech expertise in **ISO 20022 message flows, SEPA instant payments, cross-border payment processing**, and **PSD2 regulatory compliance**, translating customer impact into scalable platform features serving thousands of restaurant merchants.

SKILLS

Backend & Object-Oriented Languages – Java, Kotlin, Spring Boot, REST APIs, microservices architecture.

Frontend Frameworks – React, Angular, responsive web design, component architecture.

Cloud & Infrastructure – AWS (EC2, DynamoDB, Lambda, CloudWatch, ECS), Docker containerization, CI/CD pipelines.

Message & Integration Technologies – Apache Pulsar, Apache Camel, message routing, event-driven architecture, data transformations.

Data & Database – DynamoDB, PostgreSQL, MySQL, Oracle, SQL optimization, data modeling, schema design.

DevOps & Quality Practices – Jenkins, Git, automated testing, security reviews, performance testing, end-to-end testing, continuous delivery, Linux, monitoring.

Fintech & Payments Domain – ISO 20022 message flows, SEPA instant payments, cross-border payment processing, PSD2 compliance, payments platform architecture, transaction processing at scale.

EDUCATION AND TRAINING

PROJECTS

Real-Time Payments Pricing Engine & Dashboard Platform (HCL Technologies)

- Engineered a full-stack pricing platform for Toast using **Kotlin and Java Spring Boot** microservices backed by **DynamoDB** for real-time credit card payment rate calculations; implemented **Apache Pulsar** event streams to ingest **50,000+ transaction events/second** and **Apache Camel** routing rules to transform pricing updates across 8 downstream systems.
- Delivered a responsive **React** frontend dashboard enabling restaurant operators to view, simulate, and configure dynamic pricing tiers in real-time; integrated with backend services via **REST APIs**, performed **end-to-end testing** and **performance testing** under load, and achieved **<2s p99 latency** for pricing queries.
- Implemented comprehensive monitoring and observability using **CloudWatch metrics** and **DynamoDB monitoring** to track transaction throughput, error rates, and pricing engine health; reduced incident detection time by **40%** through automated alerting and on-call runbook integration.
- Executed **continuous delivery** via **Jenkins** pipelines with **automated testing** across unit, integration, and contract tests; managed **Git** branching strategy, code reviews, and change-control to safely deploy pricing updates to production supporting millions of daily transactions with **zero revenue impact**.
- Collaborated with product and operations teams to gather requirements, define acceptance criteria, and support UAT; documented platform architecture and operational procedures in **Confluence** for handoff to production support team; drove real-world customer impact by enabling restaurants to offer flexible, competitive payment pricing.

Payment Message Transformation & Reconciliation Pipeline (HCL Technologies)

- Built a **Python** and **Java Spring Boot** data pipeline to ingest, validate, and reconcile **ISO 20022 message flows** from **SEPA instant payments** and **cross-border payment** networks; leveraged **Apache Camel** message routing to normalize **MT/MX SWIFT message formats** and **PostgreSQL** for audit-trail storage, processing **250,000 transactions/day** with 100% accuracy.
- Implemented **PSD2 compliance** validation rules and data masking across payment records using **Python pandas** for ETL transformations; configured **CloudWatch** alarms and **Splunk** dashboards to monitor transaction reconciliation health, flagging mismatches within **5 minutes** and reducing manual investigation time by **60%**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
