PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and delivered **undergraduate and postgraduate teaching modules** in **software engineering, distributed systems, and cybersecurity fundamentals** at HCL Technologies enterprise training academy, mentoring 40+ software engineers annually through hands-on labs, code reviews, and capstone projects aligned with industry best practices.
- Architected **software engineering practices and CI/CD pipelines** using **Jenkins, Git, and Agile/Scrum methodologies** across enterprise Java Spring Boot microservices; established code-review standards, branching strategies, and change-control workflows that improved deployment reliability by **35%** and reduced post-release defects by **28%**.
- Developed **distributed systems monitoring and incident-response protocols** using **Splunk, CloudWatch, and Dynatrace** for multi-region AWS infrastructure; led **P1/P2 incident triage** and **SLA management**, achieving **99.8% uptime** across production payment-processing and ERP systems serving 50+ concurrent users.
- Conducted **cybersecurity and regulatory compliance training** covering **GDPR, data protection, ISO 20022 message security, and audit-trail governance** for banking and financial services teams; documented threat-modeling workflows and secure API design patterns used across 15+ enterprise integration projects.
- Mentored cross-functional development teams in **database design, SQL optimization, and data warehousing** using **PostgreSQL, MySQL, and Oracle**; co-authored technical guides on **schema migration, ETL pipeline development, and data-integrity validation** that accelerated junior engineer onboarding by **40%**.
- Published technical documentation and case studies on **enterprise application support, REST API design, Docker containerization, and Linux systems administration**; presented research findings on **production observability** and **distributed-system resilience patterns** at internal knowledge-sharing forums and industry meetups.

SKILLS

Teaching & Academic Leadership – undergraduate and postgraduate curriculum design, software engineering pedagogy, distributed systems instruction, cybersecurity education, mentoring, capstone supervision.

Software Engineering & Development – Java Spring Boot, REST APIs, Python, SQL, Git, CI/CD pipelines, Jenkins, Agile/Scrum, code review, change management, software architecture.

Cybersecurity & Compliance – GDPR, data protection, regulatory compliance, audit-trail governance, ISO 20022 security, threat modelling, secure API design, production security patterns.

Distributed Systems & Production Operations – cloud infrastructure (AWS EC2, S3, Lambda, CloudWatch), Docker containerization, Linux administration, application monitoring (Splunk, Dynatrace), incident response, SLA management, reliability engineering.

Database & Data Systems – PostgreSQL, MySQL, Oracle, SQL optimization, schema design, data warehousing, ETL pipeline development, data integrity validation, distributed data flows.

Research & Knowledge Dissemination – technical writing, case-study authorship, research publication, conference presentations, knowledge-sharing facilitation, systems documentation.

Enterprise & Financial Systems – ERP system integration, payments processing (SWIFT MT/MX, ISO 20022, SEPA), cross-border payments, PSD2, Open Banking, banking-domain operations.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin

02/2026

BACHELOR OF ENGINEERING in Computer Science – SNS College
of Technology, Coimbatore, India

01/2021

PROJECTS

Software Engineering Pedagogy & Distributed Systems Laboratory Framework (UCD School of Computer Science)

- Designed and implemented a **capstone laboratory environment** teaching **distributed systems design, microservice architecture, and cybersecurity hardening** to **80+ undergraduate and postgraduate students** annually; students built **multi-tier REST APIs** using **Java Spring Boot and Python FastAPI** deployed on **AWS EC2 and Docker containers** with full **CI/CD pipeline integration**.
- Developed **hands-on cybersecurity modules** covering **secure API design, threat modelling, GDPR compliance, and regulatory audit-trail implementation**; lab exercises included **production incident-response simulations** using **Splunk and CloudWatch**, preparing students for real-world **SLA management and P1/P2 triage workflows** in regulated financial systems.
- Created **comprehensive technical documentation** on **Git branching strategies, code-review standards, change-control processes, and distributed systems resilience patterns** (failover, load-balancing, observability); documentation achieved **90% positive feedback** from student cohorts and served as reference material for **15+ industry partner organizations**.
- Mentored **12 postgraduate research students** in designing and evaluating **software engineering practices, distributed-system reliability metrics, and production monitoring architectures**; published **3 peer-reviewed case studies** on incident-response automation and observability-driven design.
- Integrated **real-world banking and payment-systems case studies** (SWIFT messaging, ISO 20022 flows, cross-border payment orchestration, SEPA compliance) into curriculum; guest lectures on **production financial systems, regulatory requirements, and enterprise change management** enhanced student readiness for careers in fintech and regulated software engineering.

Enterprise Banking Systems Integration & SWIFT Messaging Operations Dashboard (HCL Technologies)

- Led design and delivery of **production SWIFT messaging dashboard** supporting **ISO 20022 and MT/MX message flows** for a **Tier-1 banking client**; integrated **payment-operations monitoring, transaction-flow visibility, and operational alerting** serving **50+ daily users** processing **100,000+ payment messages monthly**.
- Implemented **GDPR-compliant data governance, audit-trail logging, and regulatory compliance workflows** for cross-border payments and SEPA transactions; coordinated with banking-domain business analysts and compliance teams to ensure **PSD2 Open Banking requirements and ISO 20022 message standardization**.
- Engineered **distributed backend architecture** using **Java Spring Boot microservices, PostgreSQL data warehouse, and AWS Lambda** for real-time ETL and reporting; dashboard powered by **Python data pipelines and SQL queries** reduced **payment-operation SLA incidents by 42%** and enabled **2-minute reconciliation cycles** vs. **daily legacy batch processes**.
- Drove **change-control coordination and UAT testing** across interconnected ERP and payment-operations systems; established **post-go-live incident triage and root-cause analysis workflows** using **Splunk logs and Dynatrace metrics**, achieving **99.7% uptime SLA** across production payment infrastructure.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
