PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and implemented **core banking product logic** for deposits, accounts, and fees using **Java Spring Boot** and **REST APIs**, building ledger-posting rules that ensured **100% accounting accuracy** and **idempotency** across 50M+ daily transactions in production banking environments.
- Developed **integration services and APIs** connecting core banking systems to downstream channels (payments, KYC, CRM, GL, fraud, notifications) using **event-driven pub/sub architectures** and **PostgreSQL/Oracle data models**, achieving **99.95% SLA** uptime and **sub-100ms** API latency for regulatory and finance reporting.
- Configured **financial events and schedules** (interest accrual, compounding, billing cycles, statement generation) and product lifecycle states (onboarding, maturity, closures, arrears) using **Spring Boot scheduling** and **Python ETL pipelines**, processing **2M+ monthly billing events** with zero reconciliation gaps.
- Built comprehensive **unit, integration, and contract tests** including edge cases and reconciliation scenarios using **JUnit, Mockito, and TestContainers**, achieving **92% code coverage** and reducing production incidents by **40%** across core banking product releases.
- Implemented **robust error handling, retries, and reconciliation logic** for event-driven integrations using **AWS Lambda, CloudWatch, and Python**, with **automated dead-letter queues** and observability dashboards that reduced integration failure resolution time from **4 hours to 15 minutes**.
- Collaborated with Finance, Risk, and Regulatory teams to deliver **auditable ledger integrity controls, GDPR compliance, and financial controls reporting** via **Power BI dashboards** and **SQL data extracts**, supporting **3 regulatory audits** with zero control gaps and enabling **PSD2/Open Banking** compliance for **50+ banking clients**.

SKILLS

Core Banking & Product Engineering – core banking product logic, vault-based ledger engines, accounts, deposits, lending, fees, interest, limits, delinquency, posting rules, product lifecycle states, financial events, schedules, interest accrual, compounding, billing cycles, statement generation.

Platform Integration & APIs – REST APIs, event-driven integrations, pub/sub, streaming, integration services, channel integrations, KYC, CRM, GL, fraud, notifications, error handling, retries, reconciliation, observability.

Banking & Payments Domain – SWIFT messaging (MT/MX), ISO 20022 message flows, SEPA, cross-border payments, PSD2, Open Banking, payments processing, ledger integrity, financial controls, regulatory compliance, GDPR, audit trails, change-control management.

Backend & Cloud Development – Java Spring Boot, Python, REST APIs, AWS (EC2, S3, Lambda, CloudWatch), Docker, PostgreSQL, MySQL, Oracle, Git, Jenkins CI/CD.

Testing & Quality Assurance – unit testing, integration testing, contract testing, edge case testing, reconciliation testing, JUnit, Mockito, TestContainers, code coverage.

Data Engineering & Analytics – Python (pandas, NumPy), SQL data modelling, ETL pipelines, Power BI dashboards, DAX, data warehousing, financial reporting, reconciliation workflows.

Observability & Monitoring – Splunk, Dynatrace, CloudWatch, operational dashboards, alerting, SLA management, incident response, P1/P2 triage.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin

02/2026

BACHELOR OF ENGINEERING in Computer Science – SNS College
of Technology, Coimbatore, India

01/2021

PROJECTS

Vault-Based Deposit & Lending Product Platform (HCL Technologies)

- Architected and delivered a **core banking product engine** implementing accounts, deposits, lending, and fee management on a **modern ledger architecture** using **Java Spring Boot** and **PostgreSQL**, processing **5M+ daily account transactions** with **guaranteed posting idempotency** and **100% reconciliation accuracy** across maturity, closure, and arrears workflows.
- Built **integration APIs and event-driven pub/sub services** connecting the core platform to payment channels, KYC systems, fraud detection, and GL systems using **AWS Lambda** and **Spring Cloud Stream**, with automated retry logic and **dead-letter queues** that reduced integration failures by **60%** and enabled **real-time channel posting** at **sub-100ms latency**.
- Implemented **financial event scheduling and interest accrual logic** (compounding, billing cycles, statement generation triggers) using **Spring Boot scheduled tasks** and **Python cron-based ETL**, reliably processing **2M+ monthly events** with zero missed cycles and enabling **PSD2-compliant interest disclosure** for regulatory reporting.
- Designed comprehensive **test suites covering unit, integration, contract, and reconciliation scenarios** using **JUnit, Mockito, TestContainers**, and custom ledger reconciliation tools, achieving **95% code coverage** and detecting **12 critical edge cases** (e.g., leap-year interest, negative balance handling) before production.
- Delivered **audit trails, financial controls, and regulatory compliance dashboards** using **Power BI** and **PostgreSQL data extracts**, with **GDPR-compliant data masking** and **immutable ledger logging**, enabling **zero-finding regulatory audits** and supporting **40+ banking clients** in **SEPA/Open Banking certification**.

SWIFT Payments Operations & ISO 20022 Migration Platform (HCL Technologies)

- Supported production SWIFT messaging dashboard processing **500K+ MT/MX payment messages daily**, implementing **ISO 20022 message parsing** and **transaction-flow visibility** with **Splunk** and **CloudWatch monitoring** to achieve **99.9% SLA uptime** and **sub-minute incident response** for cross-border and SEPA payments.
- Collaborated with banking domain BAs and Regulatory teams to map **PSD2 compliance requirements**, reconciliation workflows, and tokenization concepts into system design, supporting **UAT coordination** and **post-go-live triage** for **3 major banking clients** across **GDPR data-handling and audit-trail governance**.
- Automated payment reconciliation and reporting using **Python scripts** and **PostgreSQL queries**, validating **ISO 20022 message structure integrity** across instant payments and cross-border flows, reducing manual reconciliation time by **75%** and enabling **24-hour settlement reporting** for Finance and Risk teams.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
