PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and implemented **React** frontend components with **Redux** state management for real-time data visualization dashboards, improving page load performance by **32%** and supporting **50K+** concurrent users in production monitoring systems.
- Developed **Ruby on Rails** backend services and **REST APIs** for enterprise application integrations, following **test-driven development** practices with **RSpec** and achieving **95%** test coverage across **12** critical microservices.
- Executed full software development lifecycle responsibilities including **design review, implementation, testing, deployment, and production support** using **GitHub, GitHub Actions, and Kubernetes** infrastructure; reduced deployment lead time from **4 hours to 18 minutes** through CI/CD pipeline optimization.
- Investigated production incidents and bugs across distributed systems, identifying root causes and writing regression-preventing tests; resolved **47** P1/P2 issues with average mean-time-to-recovery of **22 minutes** using **Datadog** monitoring and **MySQL/Redis** query analysis.
- Built clean, maintainable, well-tested code using **OOP principles** and **design patterns** in collaboration with peer code review processes; refactored legacy **JavaScript** modules to modern **React** architecture, reducing bundle size by **28%** and improving time-to-interactive by **1.2 seconds**.
- Contributed to technical improvements through performance debugging, database query optimization on **MySQL**, and **Redis** caching strategy implementation; participated in agile ceremonies and continuous improvement retrospectives to drive engineering practices across the Voice team.

SKILLS

Backend & API Development – Ruby on Rails, REST APIs, object-oriented programming, design principles, service-oriented architecture.

Frontend Development – React, JavaScript, Redux, component architecture, state management.

Testing & Quality – test-driven development (TDD), RSpec, Selenium WebDriver, peer code review, design review.

Data & Infrastructure – MySQL, Redis, Kafka (event processing), Kubernetes, GitHub, GitHub Actions.

Monitoring & Observability – Datadog, production support, incident investigation, debugging, performance optimization.

Engineering Practices – agile workflows, continuous deployment, CI/CD pipelines, collaboration, communication.

Additional Technical Skills – Java, Spring Boot, Python, SQL, AWS (EC2, S3, Lambda, CloudWatch), Docker, Linux, Jenkins, Splunk, Dynatrace.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Real-Time Voice Call Analytics & Monitoring Dashboard (HCL Technologies)

- Led full-stack development of a **React + Redux** frontend integrated with **Ruby on Rails** backend APIs to deliver real-time call metrics, agent performance dashboards, and system health monitoring for telephony operations, serving **500+ concurrent agents** across **8 regions**.
- Architected **Kafka**-based event-processing pipeline to ingest **2M+ call events per day**, persisted to **MySQL** with **Redis** caching for sub-100ms query latency; designed schema for call state transitions, hold times, transfer logs, and IVR routing paths.
- Implemented comprehensive **RSpec test suite** with **95%** code coverage and **Selenium WebDriver** end-to-end tests for critical user workflows; deployed via **GitHub Actions** to **Kubernetes** clusters, achieving zero-downtime deployments and **99.95%** uptime SLA.
- Optimized frontend performance through React component memoization, lazy-loaded dashboards, and Redux selector refactoring, reducing initial load time from **4.2s to 1.8s** and improving time-to-interactive for agents by **55%**.
- Monitored production health using **Datadog** observability stack; identified and resolved latency bottlenecks in **MySQL** aggregation queries and **Kafka** consumer lag, reducing P95 dashboard response time from **850ms to 180ms** and enabling business to scale peak concurrent users by **3x**.

SWIFT Payments Operations Dashboard & Incident Response Platform (HCL Technologies)

- Developed production support and monitoring platform for SWIFT messaging (MT/MX message formats) and ISO 20022 payment flows using **Java Spring Boot** and **SQL** (PostgreSQL, Oracle), supporting cross-border payments, SEPA transactions, and regulatory compliance reporting for banking client with **€50B+ daily throughput**.
- Built real-time alerting and transaction-flow visibility dashboards using **Splunk** and **Dynatrace**; implemented automated SLA monitoring with P1/P2 incident escalation logic, achieving **98.2%** on-time incident response and reducing mean-time-to-resolution by **31%**.
- Engineered **Python** automation scripts for ETL data pipelines, reconciliation workflows, and scheduled reporting of payment message audit trails; ensured GDPR and financial-services regulatory compliance across system logs and data retention policies using **Jenkins** CI/CD orchestration.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
