PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Triaged and investigated **production incidents** across enterprise **Java Spring Boot** and **Angular** codebases at HCL, correlating events via **Splunk**, **CloudWatch**, and **Dynatrace** to identify root causes rather than surface symptoms; resolved **P1/P2 issues** within SLA, achieving **99.5% application uptime** through methodical end-to-end tracing from UI behaviour through service logic to data layer.
- Implemented targeted **code fixes** for confirmed bugs in **Spring Boot REST APIs** and **Angular** frontends, ensuring all changes were covered by unit and integration tests, submitted via **Git** pull requests, and peer-reviewed before merging; escalated architectural concerns and high-risk modifications to senior engineers, maintaining code quality standards across **30+** production deployments.
- Built and maintained **internal tooling and automation scripts** using **Python** and shell scripting to accelerate production investigations—log query utilities, diagnostic dashboards via **Power BI** and **Confluence** documentation—reducing mean time to diagnosis (MTTD) by **40%** for recurring payment-processing and data-integrity issues.
- Produced clear **post-incident summaries** covering root cause, resolution, and preventive actions; built a library of **debugging playbooks and how-to guides** for common issues in SWIFT messaging, payment reconciliation, and ERP integration workflows—enabling any engineer to follow step-by-step procedures and reducing incident recurrence by **35%**.
- Navigated **AWS infrastructure (EC2, S3, Lambda, CloudWatch)** to support production investigations, reviewing logs, metrics, and resource state to identify environment-level contributors to issues; collaborated with DevOps teams on infrastructure-level changes required for issue resolution, utilizing **Docker** containerization and **CI/CD Jenkins pipelines** for deployment verification.
- Evaluated and assessed **observability platforms**, log-analysis tools, and incident-management technologies for operational efficiency gains; researched emerging SaaS operations tooling and presented concise capability and cost-benefit assessments to technical leadership, recommending **Dynatrace** adoption which improved alert precision by **50%** and reduced false-positive escalations.

SKILLS

Backend & Full-Stack Engineering – Java Spring Boot, REST APIs, Python, Flask, FastAPI, SQL (PostgreSQL, MySQL, Oracle), data pipelines, ETL.

Frontend Engineering – Angular, React, JavaScript, HTML/CSS, UI debugging, end-to-end tracing.

Cloud & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), Docker, Linux, shell scripting, CI/CD (Jenkins, Git), change-control management.

Production Operations & Observability – incident investigation, root-cause analysis, log analysis, metrics correlation, Splunk, CloudWatch, Dynatrace, SLA management, P1/P2 incident response, post-incident summaries.

Internal Tooling & Automation – Python automation scripts, diagnostic dashboards, log-query utilities, playbook development, debugging utilities, operational reporting.

Business Intelligence & Analytics – Power BI, Tableau, DAX, Power Query, data modelling, data warehousing, executive dashboards.

Domain Expertise – SWIFT messaging (MT/MX formats), ISO 20022 message flows, payments processing, SEPA / instant payments / cross-border payments, PSD2, Open Banking, tokenization, ERP integration, GDPR / data protection, financial-services compliance.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

Production Incident Triage & Observability Platform (HCL Technologies)

- Architected and deployed an integrated **log-query and diagnostic dashboard** aggregating **Splunk**, **CloudWatch**, and **Dynatrace** data to correlate events across **Java Spring Boot microservices** and **Angular frontends**, enabling engineers to trace production issues from customer symptom through service logic and infrastructure state in **<2 minutes** instead of **20+ minutes**.
- Built **Python automation scripts** and shell-based diagnostic utilities to extract, parse, and cross-reference logs, metrics, and transaction data; integrated with existing **CI/CD Jenkins pipelines** to auto-trigger forensics on **P1/P2 incident detection**, accelerating root-cause identification by **45%**.
- Developed a structured **playbook library** in **Confluence** documenting step-by-step debugging procedures for **20+ recurring production issues** spanning payment reconciliation failures, ERP integration timeouts, and data-consistency anomalies; updated playbooks after every significant incident to incorporate learnings, enabling **any engineer** to resolve issues independently and reducing MTTD by **40%**.
- Evaluated and recommended adoption of **Dynatrace** as the primary observability platform, assessing capability, integration effort with existing **AWS CloudWatch** and **Splunk** infrastructure, and cost-benefit against alternatives; migration reduced false-positive alert escalations by **50%** and improved incident precision by enabling real-time correlated alerting across services.

SWIFT Payments Operations Dashboard & Incident Response Toolkit (HCL Technologies)

- Owned production support and **end-to-end incident investigation** for a SWIFT messaging and payments-operations dashboard serving a Tier-1 banking client; implemented targeted bug fixes in **Java Spring Boot backend** and **Angular UI** to resolve transaction-flow visibility and operational alerting issues, ensuring **ISO 20022 / MT/MX message compliance** and **100% SLA compliance** across **50,000+ daily payment messages**.
- Built diagnostic tools and **SQL data-validation queries** across **PostgreSQL** and **Oracle** to trace payment-reconciliation discrepancies, identify SEPA instant-payment processing delays, and validate tokenization workflows; created **Power BI dashboards** for reconciliation monitoring and cross-border payment KPIs, reducing manual audit-trail reviews by **60%**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
