PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and executed **API automation test cases** using **Python** and **REST API** testing methodologies to validate payment-operations dashboard integrations across 40+ SWIFT messaging endpoints, achieving **92% test coverage** and reducing regression-cycle time by **35%**.
- Built and maintained **Web UI automation test frameworks** using **Selenium** and **TestNG** to automate functional and performance testing across enterprise Java/Spring Boot applications, executing **500+ test scripts** per sprint with **89% pass rate** and enabling parallel execution across CI/CD pipelines.
- Collaborated with development teams and product managers to clarify product requirements, assess test feasibility, and design reasonable test cases based on requirement specifications, coordinating UAT across 8+ cross-functional teams and ensuring **zero critical defects** at production release.
- Analyzed test results, generated detailed quality assurance reports, and tracked defect resolution using **Jira** and **Git** version control, providing actionable insights to stakeholders and enabling data-driven product release decisions that improved time-to-market by **28%**.
- Optimized automation test frameworks through refactoring of **Page Object Model** architectures, implementing reusable test components in **Python** and **Java Spring Boot**, and integrating **Jenkins CI/CD pipelines** for continuous test execution, reducing test maintenance overhead by **40%**.
- Conducted performance testing and specialized quality assurance assessments using monitoring tools (**Splunk**, **Dynatrace**) to validate application stability under load, identifying **12+ critical performance bottlenecks** and collaborating with development to resolve them prior to release.

SKILLS

Automation Testing Frameworks & Tools – Selenium, TestNG, pytest, Postman, JMeter, Cypress, Playwright, Page Object Model, API automation, Web UI automation.

Programming Languages & Coding – Python, Java, REST APIs, HTTP protocols, RESTful API testing, asynchronous page handling, dynamic element detection.

Test Case Design & Software Testing Processes – Test case design, test coverage analysis, testing theories, defect tracking, test execution, test reporting, quality assurance methodologies.

CI/CD, DevOps & Version Control – Jenkins pipelines, Git, SVN, continuous integration, automated test execution, build pipelines.

Quality Assurance & Defect Management – Jira, defect management, bug tracking, test result analysis, quality metrics, SLA management, production support.

Performance Testing & Monitoring – Splunk, Dynatrace, CloudWatch, performance testing, load testing, reliability engineering, application monitoring.

Communication & Collaboration – Cross-functional team collaboration, stakeholder reporting, requirements analysis, UAT coordination, agile/scrum ceremonies.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Insurance Claims Processing Automation Test Suite (HCL Technologies)

- Architected end-to-end **API and Web UI automation test framework** using **Playwright** and **Python pytest** to validate insurance claims processing workflows across 25+ microservices, implementing **Page Object Model** patterns and async-handling logic to manage dynamic form elements and real-time claim-status updates.
- Designed and deployed **1,200+ automated test cases** covering happy-path, edge-case, and negative-scenario validation across claims submission, approval routing, and payout reconciliation modules, achieving **94% test coverage** and enabling fully-automated nightly regression testing via **Jenkins CI/CD pipelines**.
- Integrated **Postman** and **JMeter** for API contract testing and performance baseline validation, simulating **500+ concurrent claim submissions** per minute to validate system throughput; documented **8 critical bottlenecks** in claims-routing microservices and provided resolution recommendations to dev teams.
- Established defect tracking and quality-metrics dashboard using **Jira** and custom **Python** reporting scripts, automating test-result aggregation and generating executive-ready QA reports that reduced time-to-release decision by **2 weeks** and improved stakeholder visibility into quality readiness by **3x**.
- Mentored 3 junior QA engineers on **test framework best practices**, **Selenium/Playwright** architecture patterns, and **HTTP protocol** fundamentals; conducted code reviews and established **Git branching standards** for test-script contributions, ensuring consistency across **50K+ lines** of test code.

SWIFT Payments Dashboard Reliability & API Test Automation (HCL Technologies)

- Developed comprehensive **API automation test suites** for SWIFT messaging dashboard using **Python** and **Postman**, validating MT/MX message formats, ISO 20022 compliance, and cross-border payment processing flows across **150+ API endpoints**, achieving **98% pass rate** and ensuring regulatory compliance for production payments operations.
- Designed test cases and conducted Web UI automation testing across the payments dashboard to validate real-time transaction-flow visibility, operational alerting, and SEPA/instant-payment message routing, using **Selenium** to handle asynchronous page loading and dynamic settlement-status updates with **zero false negatives**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
