PROFESSIONAL EXPERIENCE

Software Engineer — HCL Technologies, Chennai, India

Sep 2021 – Jan 2025

- Developed **Databricks solutions** on the Lakehouse architecture, ingesting and transforming large financial datasets for enterprise analytics.
- Engineered and optimized **Python-based ETL/ELT pipelines** for the Centralized Data Platform, processing over 500 GB of daily transaction data.
- Implemented **Delta Live Tables** to manage complex data ingestion and transformation workflows, ensuring data quality and reliability for downstream consumers.
- Applied **Unity Catalog** features and IAM best practices to implement granular security governance and access control for sensitive financial data.
- Contributed to the **Agile/Scrum development process**, actively participating in sprint planning, daily stand-ups, and code reviews for data platform enhancements.
- Developed **monitoring solutions** for data pipeline performance and data quality, integrating alerts into a centralized dashboard to track operational health.
- Managed and supported **AWS cloud infrastructure** components including S3, Glue, and Lambda, ensuring scalability and security for data processing tasks.

SKILLS

Data Platform – Databricks, Delta Lake, Unity Catalog, Lakehouse Architecture

Cloud & Infrastructure – AWS, S3, Glue, Lambda, Terraform

Data Processing & ETL – Python, Spark, ETL, ELT, Delta Live Tables

Databases & Querying – SQL, Data Modeling

Development Practices – Agile, Scrum, Git, API Integrations

Observability – Monitoring, Data Quality, Pipeline Performance

PROJECTS

Enterprise Data Lakehouse Implementation

- Designed and built a scalable data ingestion framework using **Python and Spark** on Databricks to process multi-source financial data, handling approximately 1.5 TB of historical records.
- Implemented **Delta Lake tables** with time-travel capabilities for robust data versioning and auditing, supporting complex analytical queries and regulatory compliance.
- Developed automated data quality checks and alerts within the pipeline, reducing data anomaly detection time by **~40%** for the analytics team.

Financial Transaction Data Pipeline Automation

- Created Python scripts to automate the extraction, transformation, and loading of transaction data from disparate sources into a unified staging area.
- Developed **REST API integrations** to ingest real-time transaction feeds, ensuring timely data availability for operational reporting and fraud detection systems.
- Applied **SQL and data modeling** techniques to structure the processed data for efficient querying by business analysts and data scientists, supporting a team of 5 analysts.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin

Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India

2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
