PROFESSIONAL EXPERIENCE

Software Engineer — HCL Technologies, Chennai, India

Sep 2021 – Jan 2025

- Built production Python services to detect, investigate, and respond to cybercrime and abuse, processing over 5,000 alerts weekly.
- Designed and deployed agentic systems and AI-powered workflows that automate cybercrime intelligence enrichment and analysis, reducing manual effort by an estimated 40%.
- Developed and improved signals and decisioning logic that measurably reduced abuse by 15% across key platform attack vectors.
- Translated cybercrime intelligence findings on phishing and brand abuse into durable engineering solutions for customer protection.
- Contributed to the design and implementation of services and APIs that convert cybercrime intelligence into scalable customer protections.
- Owned end-to-end system lifecycle for security tooling, from design and build through testing, deployment, monitoring, and iterative improvement.
- Containerised backend services with Docker and deployed them to a Kubernetes cluster on AWS, managing CI/CD pipelines with Jenkins.

SKILLS

Languages – Python, Java, SQL, Bash

Cloud & Orchestration – AWS (EC2, S3, Lambda, CloudWatch), Docker, Kubernetes, Jenkins

Backend & APIs – Spring Boot, REST APIs, FastAPI, Flask

Data & Analytics – pandas, NumPy, scikit-learn, PostgreSQL, MySQL, Oracle

Security & Cybercrime – Cybercrime Investigation, Phishing, Brand Abuse, Digital Identity Crime, Agentic Systems, AI Workflows

PROJECTS

AI-Powered Phishing Detection System (HCL Technologies)

- Developed a Python-based system that analyzes email headers and content for phishing indicators, achieving a 92% precision rate on a dataset of 150,000 emails.
- Integrated a fine-tuned transformer model for natural language understanding to identify malicious intent and brand impersonation patterns.
- Built a REST API using FastAPI to serve detection results, handling an average of 50 requests per second during peak testing.

Automated Cyber Threat Intelligence Enrichment (HCL Technologies)

- Engineered Python scripts to automatically enrich threat intelligence feeds with contextual data from multiple sources, including IP reputation databases and WHOIS lookups.
- Designed and implemented agentic workflows to correlate observed indicators of compromise, reducing the manual investigation time for security analysts by approximately 30%.
- Stored and queried enriched data using PostgreSQL, facilitating faster analysis and reporting on emerging cyber threats.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin

Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India

2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
