PROFESSIONAL EXPERIENCE

Software Engineer — HCL Technologies, Chennai, India

Sep 2021 – Jan 2025

- Operated, monitored, and maintained critical data center facilities systems, including UPS, generators, and electrical distribution, responding to abnormal conditions to minimize recovery time.
- Inspected and performed routine maintenance on various data center systems, including non-critical electrical and mechanical components, ensuring operational readiness.
- Provided technical assistance to senior technicians by reading blueprints, schematics, and sequences of operations to assess system working order.
- Supported the startup, commissioning, and integration of new electrical equipment and systems into existing data center facilities infrastructure.
- Participated in material handling tasks, including lifting and working from platforms and ladders, to support maintenance and repair activities.
- Collaborated with cross-functional teams to ensure environmental and safety standards were consistently met within the data center operations.
- Managed the uptime and maintenance of control and monitoring systems for power supply and distribution, ensuring high availability.

SKILLS

Electrical Systems – Electrical Distribution Systems, HV, LV, Protection and Controls, Power Quality, Generators, UPS systems, electrical distribution

Data Center Operations – Facilities Technicians, critical operations, control room, electrical systems, mechanical systems, HVAC systems, monitoring systems

Maintenance & Repair – Equipment startup, commissioning, installation, maintenance, repair, system components

Documentation & Procedures – Blueprints, schematics, sequence of operations, industry best practices, protocols, safety standards

General Skills – Associate's degree, trade school certification, practical experience, non-standard hours, shift based schedules, material handling, lifting, platforms, ladders, raised floors

PROJECTS

Data Center Electrical Distribution Monitoring System

- Developed a Python-based monitoring application to track key parameters of electrical distribution systems, integrating with simulated sensor data.
- Designed and implemented data processing pipelines using pandas to analyze power quality metrics and identify potential anomalies.
- Created operational dashboards using a basic charting library to visualize system status and alert on deviations from normal operating ranges.

Critical Operations Control Room Simulation

- Simulated a data center control room environment, practicing response protocols for abnormal conditions in power and cooling systems.
- Assisted in the evaluation of system schematics and sequences of operations for critical infrastructure components.
- Documented standard operating procedures for common fault scenarios and recovery steps, focusing on minimizing downtime.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin

Feb 2026

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
