PROFESSIONAL EXPERIENCE

Software Engineer — HCL Technologies, Chennai, India

Sep 2021 – Jan 2025

- Provided production support for enterprise trading systems, diagnosing and resolving complex incidents through **log analysis** and system behaviour investigation, ensuring adherence to strict SLAs.
- Developed and enhanced **automation tools** using **Python** to minimize manual intervention in production environments and improve system reliability, reducing repetitive tasks by approximately 40%.
- Deployed, maintained, and monitored **custom trading applications** on **AWS EC2** instances, focusing on stability, performance, and availability for critical business operations.
- Collaborated with **traders**, development, and infrastructure teams to support live trading environments, acting as a key point of contact for incident resolution and system enhancements.
- Managed system capacity, resilience, and scalability for global trading operations, contributing to infrastructure upgrades and configuration improvements to support business growth.
- Designed and implemented enhanced **monitoring and alerting** mechanisms using **Splunk** and **CloudWatch**, enabling proactive detection and faster response to operational issues.
- Containerized applications using **Docker** and deployed them to a **Kubernetes** cluster, managing configuration and basic resource allocation for predictable rollouts.

SKILLS

Scripting/Development – Python, Bash

Cloud/Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), Kubernetes, Docker

Monitoring/Observability – Splunk, Dynatrace

Databases – PostgreSQL, MySQL, Oracle

Operating Systems – Linux

Tools – Jenkins, Git, Jira, Confluence

PROJECTS

Automated Production Incident Triage System

- Developed a **Python**-based system to automatically ingest and parse logs from **Splunk**, correlating events to identify root causes for common P1/P2 incidents.
- Integrated the system with **Jira** to auto-generate tickets with pre-populated diagnostic information, reducing manual ticket creation time by 50% for the support team.
- Engineered the system to run on **AWS Lambda**, processing over 5,000 log entries per hour with a response time under 30 seconds for incident identification.

Enhancing Trading System Observability with Grafana

- Built custom dashboards in **Grafana** to visualize key performance indicators and system health for critical trading applications, consolidating data from multiple sources.
- Configured alerts within **Grafana** based on defined thresholds for latency, error rates, and resource utilization, improving proactive issue detection for the operations team.
- Supported the integration of **Prometheus** as a data source for **Grafana**, ensuring seamless data flow for real-time monitoring across distributed systems.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin

Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India

2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
