PROFESSIONAL EXPERIENCE

Software Engineer — HCL Technologies, Chennai, India

Sep 2021 – Jan 2025

- Designed and implemented **data ingestion and transformation pipelines** for core banking domains including accounts, balances, and transactions, ensuring ledger integrity for Finance and Risk reporting.
- Built robust **idempotent ingestion patterns** within event-driven systems, safely processing retries and preventing data duplication for near-real-time operational monitoring.
- Developed **batch and streaming processing patterns** with comprehensive error handling and dead-lettering strategies to support near-real-time alerts and end-of-day extracts.
- Implemented **data quality rules** for completeness, validity, and timeliness, establishing automated monitoring and alerting to maintain regulatory-grade data accuracy.
- Designed **reconciliation controls** to validate reporting datasets against source systems, including balancing checks and trial-balance alignment for audit trail support.
- Contributed to **reusable components and engineering standards**, including common ingestion frameworks and schema evolution patterns, enhancing platform consistency.
- Participated in **incident response and root-cause analysis** for production data pipelines, improving resilience through automation and post-incident actions on AWS.

SKILLS

Core Banking Data Engineering – Ledger Data Modelling, Transaction Data Modelling, Posting Sets, Journals, Sub-ledgers, Balances, Reconciliation, Double-Entry Ledger Concepts

Streaming & Integrations – Event-driven Pipelines, Kafka, CDC, Micro-batching, Pub/Sub, Near-real-time Integrations, Batch Processing

Data Platform & Operability – Cloud Infrastructure (AWS), Orchestration, Compute, Storage, Metadata Management, Observability, Logs, Metrics, Tracing, SLOs/SLIs, Runbooks

Data Quality & Controls – Data Quality Rules, Automated Monitoring, Alerting, Audit Requirements, Lineage, Traceability, Immutability

Programming & Scripting – Python, Java, SQL, Spring Boot, PL/SQL

Databases – PostgreSQL, Oracle, MySQL

Tools & Methodologies – Git, Jenkins, Jira, Confluence, Agile, Scrum, Docker, Linux

PROJECTS

Core Banking Transaction Reconciliation Engine

- Engineered a Python-based reconciliation engine to validate transaction postings against GL balances, processing approximately **1.5 million transactions daily**.
- Implemented **SQL scripts** for data extraction and transformation from PostgreSQL and Oracle databases, creating control totals for daily reconciliation reports.
- Developed **automated checks** for posting sums, balancing entries, and currency totals, reducing manual reconciliation effort by 40%.

Financial Operations Data Pipeline Automation

- Automated ETL processes using **Python and SQL** to ingest and structure financial transaction data for downstream reporting and analytics.
- Built **REST APIs with Java Spring Boot** to expose curated datasets for operational dashboards, supporting near-real-time monitoring of payment flows.
- Containerized the data pipeline services using **Docker** and deployed them on AWS EC2 instances, ensuring consistent execution across environments.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin

Feb 2026

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
