PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Designed and developed highly scalable distributed systems for content management infrastructure, focusing on reliability and scaling patterns for enterprise applications.
- Implemented event-driven architectures using message queues to process and transform content data across multiple services.
- Developed and maintained scalable data processing pipelines to support content ingestion and transformation workflows, ensuring data integrity.
- Collaborated with cross-functional teams, including product and operations, to architect solutions for complex content management challenges and system migrations.
- Participated in operational excellence initiatives, including on-call rotations and proactive system monitoring using AWS CloudWatch and Splunk to maintain service health.
- Wrote clean, maintainable Java Spring Boot code with comprehensive unit and integration testing, contributing to code reviews and sprint planning.
- Containerized Java applications using Docker and deployed them to AWS EC2 instances, managing CI/CD pipelines with Jenkins for automated builds and deployments.

SKILLS

Core Java – Java, Spring Boot, REST APIs, JUnit, Maven

Cloud & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), Docker, Jenkins, Git, Linux

Data & Analytics – SQL (PostgreSQL, MySQL, Oracle), Python (pandas, NumPy), Power BI, Tableau, DAX

Enterprise Systems – ERP integration, Change Management, Production Support, Incident Response

Methodologies – Agile, Scrum, CI/CD, Code Reviews

PROJECTS

Distributed Content Ingestion Platform

- Engineered a distributed system in Java Spring Boot to ingest and process large volumes of unstructured content data from multiple sources.
- Implemented an event-driven architecture using AWS SQS to decouple ingestion services from downstream transformation pipelines, improving system resilience.
- Developed REST APIs for managing content metadata and providing status updates to upstream systems, integrated with PostgreSQL for data persistence.

Content Transformation Pipeline Automation

- Automated content transformation workflows using Python scripts and pandas for data manipulation and format conversion, processing over 5,000 documents daily.
- Built scheduled reporting jobs with Python to provide insights into pipeline performance and data quality metrics to operations teams.
- Deployed Python data processing jobs on AWS Lambda, integrating with S3 for input and output data storage and CloudWatch for monitoring.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India 2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
