PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Designed and implemented interactive telemetry exploration and querying experiences within the **Omni IDE**, translating complex, high-cardinality data streams into comprehensible visualizations for engineers.
- Developed user flows and interaction models for an **AI-powered DevOps agent**, enabling engineers to investigate and resolve incidents with human-in-the-loop approval for agent-proposed actions.
- Collaborated with Product Managers and engineers to define feature requirements for observability tools, iterating on designs based on technical constraints and user feedback during working sessions.
- Conducted usability testing sessions for new observability features, identifying key user pain points and incorporating learnings to refine interaction models and visual design.
- Contributed to the development and extension of a **shared design system**, ensuring consistency and reusability of UI patterns across the Omni and DevOps agent experiences.
- Built interactive prototypes using **HTML, CSS, and JavaScript** to communicate design intent precisely and facilitate rapid iteration during design critique and stakeholder reviews.
- Managed incident response for critical enterprise applications using **Splunk and Dynatrace**, achieving a 98% SLA adherence rate by performing root cause analysis and coordinating timely resolutions.

SKILLS

Observability Tools – AWS CloudWatch, Omni, DevOps agent

Design & Prototyping – Interaction Design, Visual Design, Prototyping, HTML, XHTML, JavaScript, CSS, Axure

Cloud Platforms – AWS, EC2, S3, Lambda, CloudWatch

Development Tools & Methodologies – Agile, Scrum, Git, Jira, Confluence

Programming & Scripting – Java, Spring Boot, Python, SQL

Data & Analytics – Power BI, Tableau, DAX, Power Query, Data Modelling

PROJECTS

AI-Assisted Incident Triage System (HCL Technologies)

- Developed a Python-based system that ingested logs and metrics from enterprise applications, identifying anomalous patterns indicative of potential incidents for a financial-services client.
- Designed a preliminary agent-based investigation workflow, allowing operations teams to query system behavior and receive AI-generated hypotheses for root cause analysis, improving triage speed by ~15%.
- Integrated with Splunk for log aggregation and Dynatrace for performance metrics, creating a unified view of system health for a critical payments operations dashboard.

Interactive Telemetry Explorer (MSc Project)

- Built a web application using **Flask and JavaScript** to visualize and query time-series data from simulated cloud services, mimicking aspects of an IDE-style telemetry exploration tool.
- Implemented custom charting components and interactive filters to allow users to drill down into metrics, logs, and traces, making complex system behavior more legible.
- Designed data models and query interfaces in **SQL and pandas** to efficiently retrieve and process large volumes of simulated telemetry data for the application.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India 2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
