PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Developed and maintained core C++ features for an enterprise software product, focusing on performance enhancements and bug resolution within a complex codebase.
- Integrated third-party meeting platform software into the existing collaboration stack, ensuring seamless functionality and compatibility across diverse systems.
- Wrote Python scripts to automate data ingestion and processing tasks for internal analytics, reducing manual effort by approximately 40% for the team.
- Contributed to the design and implementation of automated test suites for C++ modules, increasing code coverage and reducing regression defects by 15%.
- Participated in daily Agile ceremonies and sprint planning sessions, providing technical estimations and collaborating on task prioritization for the engineering team.
- Managed production incidents for enterprise Java applications, performing root cause analysis and implementing fixes to maintain service level agreements (SLAs) for critical systems.
- Containerized several Python-based microservices using Docker for consistent deployment across development and staging environments.

SKILLS

Programming Languages – C++, Python, Java, SQL

Operating Systems – Linux, Windows

Cloud Platforms – AWS (EC2, S3, Lambda, CloudWatch)

Development Tools – Git, Jenkins, Docker, Jira, Confluence

Frameworks & Libraries – Spring Boot, pandas, NumPy, scikit-learn

Databases – PostgreSQL, MySQL, Oracle

PROJECTS

Low-Level Linux System Monitoring Service

- Developed a C++ service to monitor system resource utilization (CPU, memory, disk I/O) on embedded Linux devices, capturing real-time performance metrics.
- Implemented efficient data serialization and transmission protocols to send monitoring data to a central collection point, handling approximately 2,000 data points per minute.
- Integrated system calls and kernel interfaces to gather detailed performance counters, improving diagnostic capabilities for production issues.

Python-based ETL Pipeline for Application Logs

- Engineered an ETL pipeline using Python and pandas to parse, clean, and transform application log data from diverse sources into a structured format for analysis.
- Automated the generation of daily operational reports from the processed log data, providing key insights into application performance and error trends.
- Deployed the Python scripts on AWS Lambda, integrating with S3 for data storage and CloudWatch for monitoring and alerting.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India 2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
