PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Designed, developed, and maintained large-scale backend services for the Kestrel platform, focusing on API and systems design for high-throughput event processing.
- Took ownership of critical feature deliverables within the Kestrel platform, ensuring accountability from development through to deployment and ongoing enhancement.
- Trained a **gradient-boosted classifier** using **scikit-learn** on a ~280,000-row dataset to identify anomalous system events, achieving an **AUC of 0.87**.
- Partnered with product teams to define and implement new features within backend services, translating user needs into technical requirements and actionable development tasks.
- Mentored junior engineers on the effective use of backend feature services and best practices in API design and implementation.
- Containerized backend services using **Docker** and deployed them onto an **AWS Kubernetes** cluster (EKS), configuring resource limits and basic monitoring.
- Triaged and debugged system issues by analyzing event logs and performance metrics from **Splunk** and **CloudWatch**, identifying root causes and their impact on service operations.

SKILLS

Languages – Python, Go, Java, SQL, R

Frameworks/Libraries – Spring Boot, scikit-learn, pandas, NumPy, FastAPI, Flask

Cloud/Infrastructure – AWS, Kubernetes, Docker, Jenkins, Git

Databases – PostgreSQL, MySQL, Oracle, Cassandra, Kafka, OpenSearch, Redis

Tools/Platforms – Jira, Confluence, Splunk, Dynatrace, Power BI, Tableau

PROJECTS

Kestrel Platform Backend Service Development

- Engineered core backend features for a new UI foundation platform, processing nearly **3 trillion events daily** by implementing scalable APIs in **Python** and **Go**.
- Designed and implemented RESTful APIs for inter-service communication, focusing on **high throughput** and low latency, integrating with **PostgreSQL** and **Redis**.
- Developed automated tests and participated in code reviews to ensure code quality, maintainability, and adherence to engineering best practices for the platform.

Transaction Anomaly Detection Model

- Developed a **Python**-based feature pipeline to extract behavioural signals from a dataset of approximately **1.1 million transaction records**.
- Trained and evaluated a **LightGBM classifier** on the extracted features, tuning class weights to address a 1:140 fraud imbalance and achieving an **AUC of 0.91**.
- Packaged the trained model behind a **FastAPI** inference endpoint, implementing input validation and logging p95 latency at approximately **180ms**.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India 2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
