PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Designed and implemented telemetry collection agents in **Rust** and **Go**, contributing to upstream **OpenTelemetry** communities to enhance observability features.
- Developed and maintained highly available, massively scaled systems processing over 13 quadrillion metric observations per month, ensuring service continuity for millions of users.
- Dived deep into production issues, performing root cause analysis and applying fixes to prevent recurrence in large-scale distributed systems.
- Collaborated with a diverse team of peers in an agile environment to design, build, and maintain critical cloud services, amplifying a positive and inclusive team culture.
- Mentored junior engineers on software development best practices, including coding standards, code reviews, and effective debugging techniques.
- Leveraged **GenAI** and AI-powered development tools to enhance productivity and accelerate the delivery of new features for cloud monitoring solutions.
- Containerised telemetry collection agents using **Docker** and deployed them to **AWS EC2** instances, managing configurations and monitoring resource utilisation.

SKILLS

Languages – Rust, Go, Java, Python, C++

Cloud Platforms – AWS (EC2, S3, Lambda, CloudWatch)

Observability – CloudWatch, Splunk, Dynatrace, Metrics, Logs, Events, Telemetry

Development Tools – Docker, Jenkins, Git, Jira, Confluence, Agile, Scrum

Open Source – OpenTelemetry

PROJECTS

CloudWatch Collector Agent Development (HCL Technologies)

- Engineered a high-throughput telemetry collection agent in **Rust** for processing application logs and metrics at AWS scale, integrating with the **CloudWatch** platform.
- Implemented robust error handling and retry mechanisms within the agent, ensuring data integrity and minimizing data loss during transient network issues, reducing data gaps by approximately **15%**.
- Contributed to the agent's integration with the **OpenTelemetry** standard, facilitating broader compatibility and adoption across different AWS services.

AWS Observability Data Pipeline (HCL Technologies)

- Built a Python-based data pipeline on **AWS Lambda** and **S3** to ingest and process operational metrics from various AWS resources, supporting millions of metric observations.
- Developed automated data validation checks and anomaly detection routines for the incoming metric streams, identifying and flagging approximately **500** anomalous data points daily.
- Optimised data ingestion and processing logic, achieving a p95 latency of under **200ms** for event processing across the pipeline.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India 2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
