HARIRAMAKRRISHNAN RAMACHANDRAN

+353 89 970 6156 • hariramakrrish@gmail.com • Dublin, Ireland • **Stamp 1G — Full-Time Work Eligible**

PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Designed and implemented near-real-time network probing and telemetry processing systems for a global network infrastructure, processing billions of measurements to identify performance degradations.
- Developed automated remediation logic that pinpointed network issues within seconds and initiated corrective actions, ensuring uninterrupted customer access to AWS services.
- Collaborated with cross-functional teams, including network operations and design, to deliver high-accuracy, low-cost network insights from immense data streams.
- Engineered Python scripts to automate data ingestion and transformation for network performance metrics, improving data pipeline efficiency by **15%**.
- Developed and maintained **Java Spring Boot** microservices for network event processing, ensuring reliable communication between monitoring and remediation components.
- Containerized network monitoring services using **Docker** and deployed them onto **AWS EC2** instances, streamlining deployment and scaling processes.
- Authored detailed technical documentation and runbooks for new network monitoring features, facilitating knowledge transfer to operations teams and reducing onboarding time by **20%**.

SKILLS

Programming Languages – Java, Python, SQL, C++

Cloud Platforms – AWS (EC2, S3, Lambda, CloudWatch)

Frameworks & Libraries – Spring Boot, pandas, NumPy

Tools & Technologies – Docker, Jenkins, Git, Jira, Confluence, Linux, Splunk, Dynatrace

Concepts – Distributed Systems, Observability, Network Monitoring, Automated Remediation, CI/CD, Agile Methodologies

PROJECTS

Scalable Network Telemetry Processing System

- Developed a Python-based data pipeline to ingest and process high-volume network telemetry data from distributed probes, handling approximately **5,000 events per second**.
- Implemented data aggregation and filtering logic using **pandas** to derive actionable network performance metrics, reducing raw data volume by **30%** before storage.
- Designed and built RESTful APIs using **Flask** for querying aggregated network statistics, enabling near-real-time access for downstream monitoring dashboards.

Automated Network Anomaly Detection Service

- Engineered a service in **Java Spring Boot** that continuously analyzed network traffic patterns against established baselines to detect anomalies.
- Integrated with **AWS CloudWatch** for metric collection and implemented alerting mechanisms that triggered automated remediation workflows for detected issues.
- Wrote unit tests using **JUnit**, achieving over **90% code coverage** for core anomaly detection algorithms.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India 2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
