PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Performed real-time anomaly detection and triaging across **satellite networks**, **ground stations**, and terrestrial interconnections, responding to over 150 critical events monthly.
- Executed rapid incident response for major network disruptions, including **packet capture analysis** and device telemetry review to isolate root causes.
- Managed routine and emergency maintenance schedules for network infrastructure, coordinating with internal teams and external contractors to ensure **minimal service downtime**, averaging less than 30 minutes per scheduled event.
- Developed Python scripts to automate data collection and reporting for network performance metrics, reducing manual reporting time by approximately **15 hours per week**.
- Provided advanced troubleshooting support for complex enterprise network escalations, coordinating with engineering teams to achieve resolution within defined SLAs, closing ~95% of escalated tickets within 4 hours.
- Contributed to improving operational processes within the Network Operations Center, focusing on increasing operational efficiency and maximizing capabilities through **data analysis** and process refinement.
- Containerized network monitoring tools using **Docker** and deployed them to an **AWS EC2** environment, streamlining deployment and improving resource utilization by 20%.

SKILLS

Networking – MAC, WiFi, WDM, IPv4, IPv6, STP, VLANs, VXLANs, QinQ, BGP, OSPF, IS-IS, RDMA, DNS, DHCP, NTP, NAT, MACsec, ACLs, Anti-DDoS

Operations – Network Operations Center (NOC), Security Operations Center (SOC), Data Center Operations, Incident Response, Change Management, Maintenance Scheduling, Troubleshooting, Root Cause Analysis

Cloud & Virtualization – AWS (EC2, CloudWatch), Docker

Scripting & Automation – Python, Bash

Databases & Querying – SQL

Consumer Devices – IoT, Home security, Smart devices

PROJECTS

Starlink Network Monitoring Augmentation

- Developed a Python-based application to ingest and analyze network telemetry data from ground stations and satellite links, identifying patterns indicative of emerging anomalies.
- Implemented real-time alerting mechanisms using custom scripts that integrated with a notification service, reducing alert latency by approximately **40%** for critical network events.
- Designed and implemented basic data visualization dashboards using **SQL** and **Python** libraries to provide operational awareness of network health to the NOC team.

Automated Network Maintenance Reporting

- Created a **Bash** and **Python** solution to automate the collection of logs and status reports from various network devices (routers, switches) across multiple co-location sites.
- Engineered an automated report generation process that consolidated data into a standardized format, decreasing the time spent on manual reporting by **60%** for the operations team.
- Integrated the reporting tool with a scheduling mechanism (cron jobs) for daily execution, ensuring consistent and timely delivery of maintenance summaries.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India 2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
