PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Engaged with enterprise prospects across the manufacturing sector to understand asset tracking, condition monitoring, and maintenance challenges, positioning a smart monitoring solution as a technical answer.
- Partnered with Account Executives to support new business opportunities throughout the pre-sales cycle, gathering technical requirements and articulating business value.
- Led technical discovery sessions with plant leadership and maintenance managers, uncovering key operational pain points related to equipment reliability and uptime.
- Prepared and delivered technical demonstrations showcasing AI-powered condition monitoring capabilities, directly addressing customer challenges and ROI potential.
- Collaborated with internal engineering and product teams to design customer-specific solutions, ensuring technical feasibility and alignment with platform capabilities.
- Documented technical requirements and pre-sales activities within HubSpot CRM, supporting pipeline accuracy and forecasting for the sales team.
- Containerized a Python-based data ingestion service using Docker and deployed it to an AWS EKS cluster, enabling scalable processing of incoming sensor data streams.

SKILLS

Solutions Engineering – Technical Discovery, Product Demonstrations, Solution Design, ROI Articulation, Pre-sales Support, Customer Engagement, Stakeholder Management

Industrial & Asset Management – Condition Monitoring, Predictive Maintenance, Asset Tracking, Plant Operations, Maintenance Management, Reliability Engineering

Cloud & DevOps – AWS, EKS, Docker, CI/CD, Jenkins, Git

Programming & Scripting – Python, SQL, Java, Spring Boot

Data & Analytics – Power BI, Tableau, DAX, Data Modelling, ETL

CRM & Productivity – HubSpot CRM, Jira, Confluence

PROJECTS

Industrial IoT Monitoring Solution (HCL Technologies)

- Designed and implemented a Python-based data pipeline to ingest and process real-time sensor data from industrial equipment, focusing on anomaly detection for predictive maintenance.
- Developed REST APIs using Java Spring Boot to expose processed monitoring data and alerts to an enterprise dashboard, facilitating operational oversight for a financial-services client.
- Containerized the data ingestion and API services using Docker, deploying them to an AWS environment to ensure scalability and reliability for production workloads.

Predictive Maintenance Dashboard for Manufacturing (MSc Project)

- Built an interactive Power BI dashboard to visualize key performance indicators for industrial asset health, derived from simulated sensor data.
- Developed DAX measures and Power Query scripts to transform and model data, enabling stakeholders to track equipment status and potential failure trends.
- Conducted exploratory data analysis using R to identify correlations between operational parameters and equipment degradation, informing dashboard insights.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India 2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
